A Dynamic Theory of Judicial Role

David Landau*

Abstract

Recent scholarship has focused heavily on the activism of courts in the fragile democracies of the “Global South.” Courts in countries like India, Colombia, and South Africa have issued landmark decisions in difficult political environments, in the process raising critical but unanswered questions about the appropriate conception of judicial role in different political environments. Much of the judicial and academic effort in these contexts is self-consciously oriented towards using courts to carry out basic improvements in the quality of political systems seen as badly deficient. In other words, the core task is to improve the quality of the democratic system over time. These kinds of democracy-improving theories obviously bear a resemblance to “political process” theories in United States constitutional law, but generally differ in terms of the sweeping degree to which democracy is viewed as dysfunctional. This article critically examines the democracy-improving model of judicial review in the Global South. It argues that such a theory faces several important challenges: more work must be done to assess the plausibility and effectiveness of judicial action to improve democracy, as well as the ability of the theory to distinguish between proper and improper uses of judicial power. At the same time, it sheds new light on important problems in the field of comparative constitutional law and suggests a useful empirical agenda: rather than asking whether courts actually are overstepping their bounds by taking on legislative tasks (an ultimately unanswerable question), scholars can ask about the effects of different strategies of judicial activism on the evolution of different kinds of dysfunctional political institutions.

INTRODUCTION

Recent scholarship has focused on the role of constitutional courts in new or threatened democracies. This literature has pointed out that these courts are often faced with particular challenges that are different from the ones found in more mature democracies: they may act in “fragile democracies” that are at risk of sliding back into authoritarianism, they often act in the midst of poorly-functioning political systems, and they generally face the challenge of enforcing rights – like socioeconomic rights – that are costly to enforce. At the same time, the old assumption that courts acting in poorly-functioning political environments are weak courts has been definitively proven false: courts in places like India, Colombia, and South Africa have shown a surprising level of activism and independence.

This work problematizes the relationship between judicial review and democracy in different kinds of political contexts. Most clearly, it suggests the following question: what is the relevance of standard constitutional theory, which was developed largely in the United States, to contexts where democratic regimes are particularly vulnerable to overthrow or where democratic institutions are poorly-functioning?

Standard democratic theory as developed in the United States and Europe rests of premises that – by their own terms – do not apply in many newer democracies. For example, Waldron’s case for judicial deference rests on an assumption of well-functioning political institutions, while Tushnet’s case for popular constitutionalism assumes a robust constitutional culture. A series of dysfunctions in new democracies – vulnerability to authoritarian erosion, defects in party systems and legislative institutions, and an absence of constitutional culture – render these assumptions inapplicable. The key question then becomes: if standard political theory is inapplicable, what is the proper conception of

---

1 For examples of the recent literature on democratic transitions and judicial role, see Ozan Varol, Temporary Constitutions, 102 CAL. L. REV. ___ (forthcoming 2014) (arguing that the use of temporary rather than permanent constitutions can help to resolve various problems associated with democratic transitions); David Landau, Abusive Constitutionalism, 47 U.C. DAVIS L. REV. 189 (2013) (considering the problem of constitutional changes that work a significant erosion to the democratic, as well as responses to the problem); Samuel Issacharoff, Constitutional Courts and Democratic Hedging, 99 GEO. L.J. 961 (2011) (studying the role of constitutional courts in protecting democratic orders); Samuel Issacharoff, Fragile Democracies, 120 HARV. L. REV. 1405 (2007) (arguing that the fragility of some democratic orders justifies measures like the banning of certain parties in order to preserve the democratic order).

judicial role? New scholarship argues that there is a distinctive “constitutionalism of the global south,” but to date this literature has focused more on a set of problems or topics faced by developing regimes, such as socioeconomic rights or access to justice, rather than on a unifying conception of judicial role.4

This article aims to fill that gap. Descriptively, it shows that judicial role and constitutional design in new democracies often work off of the premise that democratic institutions should be distrusted, and not just to protect insular minorities but also to carry out majoritarian will. Judges and constitutional drafters in these countries are notably unconcerned with the classic counter-majoritarian difficulty, or the dilemma of courts imposing on democratic space and taking on legislative roles. This is because they are focused on another, more relevant problem: how to make democratic institutions work better. Courts and other non-democratic institutions often see their role within such a regime as dynamic in nature: they aim to improve the performance of political institutions through time.

I bring together evidence from different countries to show how courts have developed tools to protect democracies from erosion from within, to ameliorate defects in different kinds of party systems, and to build up civil society and constitutional cultures. A range of practices in newer democracies can best be understood through a dynamic rather than a traditional conception of judicial role. For example, courts in newer democracies routinely strike down constitutional amendments as being substantively unconstitutional because they view those amendments as a threat to democracy. From a standard theoretical perspective, striking down constitutional amendments is a much more difficult act to justify than ordinary judiciary review. As commentators have often noted, it poses a kind of ultimate counter-majoritarian difficulty, since there is no real way for democratic actors to override the decision to strike down the constitutional amendment.5 But the doctrine of unconstitutional constitutional amendment becomes easier to understand with a dynamic theory, either as a way to defend against democratic erosion or as a way to send a loud signal about the importance of core constitutional values.

Normatively, this article proceeds more cautiously, but suggests that a dynamic theory of judicial role is both defensible and useful in guiding scholars towards a fruitful set of questions. It sheds new light on some of the most active and difficult debates in the field of comparative constitutional law. Take, for example, the debate on socioeconomic rights enforcement between scholars, like

---

Mark Tushnet and Cass Sunstein, favoring “weaker” and more dialogical methods of enforcement and those scholars instead favoring more aggressive or “harder” approaches like structural injunctions. The debate has been dominated by a standard, static theoretical perspective: the main question analysts have asked is how to square effective judicial review of socioeconomic rights – which puts courts in the awkward position of having to prioritize and manage resource allocation – with due deference to democratic institutions. A dynamic perspective suggests a different agenda that transcends the strong-form/weak-form typology: courts and scholars should focus on figuring out which kinds of strategies best serve to empower civil society and to spread constitutional values. Courts engaged in such strategies can use a range of tools that lie somewhere on a spectrum between strong-form and weak-form enforcement: drafting in civil society groups to monitor compliance and formulate policy ideas, publicizing both constitutional issues and compliance failures, expanding access to the court for organizations, etc. All of these tools can be employed without having more dialogical exercises of review necessarily collapse into a strong version of judicial supremacy.

More broadly, a dynamic approach suggests an empirical agenda that should guide future work. While much recent scholarship has studied the causes of judicial independence in difficult environments, very little scholarship has considered the effects of judicial activism of different types. A dynamic conception of judicial role places this question front and center, because it requires that both judges and scholars grapple with the question of how judicial interventions of different types impact the evolution of democratic institutions. It thus demands that judges consider both questions of plausibility, or which strategies are likely to be possible in different political contexts, and questions of effectiveness, or which kinds of judicial interventions are likely to have positive rather than negative impacts on democratic development. The ultimate value of the theory is thus in asking a fresh set of questions about judicial role.

The rest of this article is organized as follows: In Part I, I argue that standard constitutional theory rests on premises that by their own terms do not apply to much of the “global south,” and that a dynamic conception of judicial role, which focuses on improving political institutions over time, offers a plausible alternative that has been adopted by many of the courts in the region. Part II develops a descriptive typology of the practices of constitutional courts and allied institutions in improving democratic performance. It sorts judicial action into three main boxes: tools designed to protect against democratic erosion, tools designed to ameliorate weaknesses in political institutions, and attempts to build democratic spaces around political institutions by building up civil society and spreading constitutional culture. Part III raises a set of common

---

6 See MARK TUSHNET, WEAK COURTS, STRONG RIGHTS 228 (2007) (arguing that “weak-form” or dialogic review offers the best way for courts to enforce socioeconomic rights); CASS SUNSTEIN, DESIGNING DEMOCRACY: WHAT CONSTITUTIONS DO 221-38 (2001) (making a similar argument).

7 See infra Part IV.A.
questions suggested by this evidence, noting how a dynamic theory suggests a new set of questions about judicial strategies and about the effects of different kinds of activism. Part IV demonstrates the theory in action by providing new perspectives on two live controversies in comparative constitutional law: the debate between proponents of “weak-form” and “strong-form” review, and the problem of unconstitutional constitutional amendments. Part V concludes and argues that a dynamic theory has the potential to guide a productive agenda for scholars interested in the very real problem of judicial role in newer democracies.

I. DEMOCRATIC DYSFUNCTION AND CONSTITUTIONAL THEORY

A central claim in constitutional theory is that judicial review in a democracy is an act that requires special justification. The core intuition of the famous counter-majoritarian difficulty is that judicial decisions to overturn the will of elected representatives in the legislature or executive are problematic acts that impinge on majority will. Courts are often said to lack the legitimacy and the capacity to make decisions that are better left to elected officials.

Theorists have wrestled with the dilemma in a number of different ways. A first group argues that it counsels for a high degree of judicial restraint: in the traditional formulation by James Bradley Thayer, a court should not substitute its own judgment for that of nationally-elected officials unless he clearly believes that they are not “reasonable.” Modern Thayerians are often popular constitutionalists, arguing that the determination of constitutional meaning is properly left to the public or to their elected representatives, rather than to the court. In the clearest and most extreme formulation of Jeremy Waldron, judicial review is unjustifiable in well-functioning democratic systems.

---

8 For the classic formulation, see ALEXANDER M. BICKEL, THE LEAST DANGEROUS BRANCH: THE SUPREME COURT AT THE BAR OF POLITICS 16-17 (1962) (“[W]hen the Supreme Court declares unconstitutional a legislative act or the action of an elected executive, it thwarts the will of representatives of the actual people of the here and now; it exercises control, not in behalf of the prevailing majority but against it.”).
Another group seeks to justify judicial review despite the difficulty, often by claiming that it is actually pro-democratic rather than anti-democratic. The best-known formulation is John Hart Ely’s political process theory, which has spawned a massive follow-up literature elaborating on and critiquing his claims. Ely’s core claim is that judicial review can be justified if courts help to reinforce democratic representation and increase participation, primarily by increasing access to the political system for groups that are systematically excluded from it.13 Ely, of course, envisioned his theory as a justification for the decisions of the Warren Court in the United States, and primarily with a view towards civil-rights era jurisprudence. But his theory has general resonance in comparative constitutional law as a possible justification for judicial action.14

What both of these veins of scholarship – those calling for deference and those calling for a carefully delineated and justifiable judicial role – share is a sense that judicial review is a problematic act that requires special justification. But this scholarship rests on a set of institutional foundations that by its own terms apply only under certain institutional conditions. Put most simply, the idea of a tension between judicial review and democracy rests in various ways on the assumption that the political institutions like the legislature and the executive are mature, well-functioning bodies that represent popular will effectively. In Waldron’s terms, the case against judicial review requires the assumption of democratic institutions “in reasonably good working order.”15 Waldron’s case for unelected judges deferring to democratic resolution of contested issues breaks down unless democratic institutions function at a reasonable level. Similarly, Mark Tushnet’s case for deference by judiciaries in order to allow constitutionalism to flourish within the political system – what he calls “political constitutionalism” – depends on “a widespread commitment among the nation’s citizens to constitutional values.”16 In systems with strong constitutional cultures, it is plausible that political actors will take constitutional principles seriously, because they will otherwise be punished by the voters. But in systems

---

13 See John Hart Ely, Democracy and Distrust: A Theory of Judicial Review 73-74 (1980) (arguing that the Warren Court was motivated by two broad goals: “clearing the channels of political change” and “correcting certain kinds of discrimination against minorities”).

14 See, e.g., Theunis Roux, The Politics of Principle: The First South African Constitutional Court, 1995-2005, at 334-35 (applying Ely’s theories to South Africa, although finding that because of the dominant-party context, the Court was largely incapable of fulfilling the goals of representation-reinforcement).

15 Waldron, supra note 12, at 1362. Waldron is clear that the assumption of “well-functioning democratic institutions” is not an assumption of perfect institutions, nor necessarily of substantively just outcomes. See id. at 1362-63. But his case does seem to rule out substantial deviations from liberal democracy along the lines studied in this article.

without strong constitutional cultures, there is no basis for the assumption that political institutions will take constitutional values seriously.

The standard theories built up to justify – or critique – exercises of judicial review thus by their own terms apply only under certain sets of institutional and cultural conditions. As I show below in section A, there are many courts around the world operating under circumstances where these conditions do not seem to hold. Further, as I show in section B, both judges and constitutional designers are often aware of this fact, and act accordingly. The key question, then, is the following: in cases where judges, politicians, and citizens generally feel that political institutions are not well-functioning, what is the proper conception of judicial role? What should courts in these political systems be doing? Section C argues that the most plausible fit is one where courts seek to ameliorate defects in their own political systems.

A final note on standard constitutional theory: Recent scholarship within the United States has suggested that the counter-majoritarian thesis has lost importance in recent years.\(^{17}\) Richard Posner argues that the decline of Thayerian judicial self-restraint is rooted in the rise of interpretive theories like originalism and textualism that posit right answers to constitutional questions.\(^{18}\) Others, chiefly political scientists, have challenged the view that United States judicial review is in fact counter-majoritarian: they find instead that the Court has tended to support majoritarian views over the long haul.\(^{19}\) At the same time, the ideas underlying counter-majoritarian constitutional remain “ubiquitous” abroad.\(^{20}\) Along with the interpretive theory of proportionality, the tension

\(^{17}\) See Mark A. Graber, The Countermajoritarian Difficulty: From Courts to Congress to Constitutional Order, 4 ANN. REV. L. & POL. SCI. 361 (2008) (arguing that recent work in political science has tended to underplay anti-democratic concerns with courts and find increasing concern with the behavior of electoral institutions).

\(^{19}\) See, e.g., Barry Friedman, The History of the Countermajoritarian Difficulty, Part One: The Road to Judicial Supremacy, 73 N.Y.U. L. REV. 333, 336-37 (1998) (challenging the view that judicial decisions are in fact counter-majoritarian and arguing that the “counter-majoritarian” difficulty as an object of study has waxed and waned in importance through United States constitutional history); see also Amanda Frost, Defending the Majoritarian Court, 2010 MICH. ST. L. REV. 757, 759 (accepting Friedman’s core thesis but arguing that differences in method of appointment between the federal and state judiciary still affect judicial behavior in important ways).

\(^{20}\) See David Law, Generic Constitutional Law, 89 MINN. L. REV. 652, 662-68 (2005) (“[T]he most fundamental of these theoretical concerns—the one from which the others derive their urgency — has a generic flavor, and that concern is the countermajoritarian dilemma.”). As Miguel Schor points out, the perceived problems with U.S. judicial review – and particularly the Lochner decision – cast a long shadow abroad, as European countries began incorporating judicial review into their democracies after World War II. See Miguel Schor, The Strange Cases of Marbury
between judicial review and democracy is one of the major strands of comparative constitutional theory.\textsuperscript{21}

At the same time, the theory of judicial review outlined in this article – that judges in poorly-functioning democracies can and do attempt to improve their political systems over time – is compatible with “majoritarian” strains in recent constitutional theory. Recent scholarship uncovers an old tradition in constitutional theory and proposes that the best way to justify a majoritarian Supreme Court might be by that the Court helps to resolve a principle-agent problem, alerting and helping to coordinate resistance if the “agent” (political institutions) carry out tyrannical acts against the principle (the “people”).\textsuperscript{22}

Efforts by courts to fix fundamental deficiencies in political systems – the kinds of deficiencies that may prevent political institutions from representing even majoritarian groups – could be presented in a similar light. Indeed, courts in places like Hungary and Colombia have at times been defended as representing majoritarian political forces better than political institutions.\textsuperscript{23} The theory of

\textsuperscript{21} The theory of proportionality is the leading interpretive or “right answer” strand to comparative constitutional theory, while counter-majoritarian thought is the leading institutional conception of judicial role. For more on proportionality and on common interpretive method across countries, see, for example, Moshe Cohen-Eliya & Iddo Porat, \textit{American Balancing and German Proportionality: The Historical Origins}, 8 INT’L J. CONST. L. 263 (2010) (arguing that proportionality review is a common method of constitutional interpretation across much of the world, although the United States is an outlier).

\textsuperscript{22} See David Law, \textit{A Theory of Judicial Power and Judicial Review}, 97 GEO. L.J. 723, 725 (2009) (arguing that judicial review can be justified without necessarily assuming an “antagonistic” relationship between the courts and the people).

\textsuperscript{23} See, e.g., Kim Lane Scheppelle, \textit{A Realpolitik Defense of Social Rights}, 82 TEX. L. REV. 1921 (2004) (arguing that due to representation problems in Hungary after the democratic transition and pressure from international organizations, courts actually did a better job of representing public will); David Landau, \textit{Political Institutions and Judicial Role in Comparative Constitutional Law}, 51 HARV. INT’L L.J. 319, 355-58 (2010) (noting how the Colombian Constitutional Court effectively managed a bailout of middle-class homeowners and justified its intervention on the grounds that the Court was closer to the people than political institutions).
judicial role presented here is defensible under either a counter-majoritarian or majoritarian conception of courts.

A. The Problems of Democratic Dysfunction

As much recent political science work has documented, the category “democracy” is a complex one, with the simply label of regime type hiding considerable variation. Many newer democracies suffer from several different kinds of problems with their political systems: (1) they are more likely to face erosion towards authoritarianism, or in other words are particularly “fragile,” (2) they suffer from problems in political representation, accountability, and capacity that make them function poorly even if they do not lead to democratic breakdown, and (3) they suffer from a general absence of constitutional culture – neither politicians nor the public cares about constitutional values. I take up these three points in turn.

First, though, two caveats. The first is that the list here is meant to be exemplary of problems faced by developing democracies, rather than comprehensive. The second, which the paper will return to below, is that the problems identified here represent differences of degree, and not of kind, with mature democracies. Some problems of democratic dysfunction exist in all systems, but it would be a mistake for a theory of judicial role to ignore the real differences between mature and developing democracies.

1. The Problem of “Fragile” Democracy

Samuel Issacharoff has recently explored the problem of “fragile democracies” – regimes that are particularly likely to fall back into some variant of authoritarianism. Breakdowns of democracy into full-fledged authoritarianism, through military coup or similar device, are now rarer than they were in the past. But erosions into hybrid or competitive authoritarian

24 For a classic study of the variation in the term democracy, see David Collier & Steven Levitsky, Democracy with Adjectives: Conceptual Innovation in Comparative Research, 49 WORLD POL. 430 (1997).

25 See Samuel Issacharoff, Fragile Democracies, 120 HARV. L. REV. 1406 (2007). Note though that Issacharoff is talking mostly about the susceptibility of democratic regimes to erosion or overthrow. See id. at 1408 (asking whether “democracies act not only to resist having their state authority conscripted to the cause of intolerance, but also, under certain circumstances, to ensure that their state apparatus not be captured wholesale for that purpose?”).

26 See FREEDOM HOUSE, FREEDOM IN THE WORLD 2013, at 24 (2013), available at http://www.freedomhouse.org/sites/default/files/FIW%202013%20Charts%20and%20Graphs%20for%20Web.pdf (noting that the percentage of countries classified as “not free” has dropped from 46 percent in 1972 to 24 percent in 2012, but the percentage of countries classified as “partly free” has increased from 25 percent to 30 percent).
regimes, which combine elements of democracy and authoritarianism, have become increasingly common. A competitive authoritarian regime is democratic in the sense that elections are held and those elections are not outright shams, but it is authoritarian in the sense that the playing field is systematically tilted in favor of incumbents. These incumbents use their control over institutions like the media, judiciary, and electoral commissions to make it unlikely they will actually lose elections even when the vote counting is fair.

It is relatively easy for some regimes to slip from being a democratic regime to a hybrid regime, because a would-be autocrat need not adopt an obviously authoritarian constitution. Instead, they can merely take steps to pack or neutralize institutions that are supposed to act as a check, while making some relatively subtle legal changes to entrench their own power. I and others have described these kinds of democratic erosions in detail elsewhere, here a few examples will suffice.

In the recent past in Latin America, presidents in Venezuela and Ecuador have replaced their existing constitutions with new ones in order to consolidate their power. In Venezuela, for example, President Chavez took office in 1999 with a bare majority of votes, but faced opposition majorities in the Congress, Supreme Court, and at the subnational level. Without any

27 The literature originated in political science as an attempt to explain post-Cold-War regime types that combined features of democracy and authoritarianism. See, e.g., Steven Levitsky & Lucan Way, Competitive Authoritarianism: Hybrid Regimes After the Cold War (2010) (arguing that many transitions to democracy in the post-Cold-War period have stopped at an intermediate point between democracy and authoritarianism); Andreas Schedler, The Logic of Electoral Authoritarianism, in Electoral Authoritarianism: The Dynamics of Unfree Competition (Andreas Schedler, ed., 2006) (arguing that a number of regimes “have established the institutional facades of democracy, including regular multiparty elections for the chief executive, in order to conceal (and reproduce) harsh realities of authoritarianism”); Larry Diamond, Thinking About Hybrid Regimes, J. DEMOCRACY, Apr. 2002, at 21, 21-22 (noting that various regimes around the world like Russia, Turkey, and Venezuela appear to hold elections but yet not be truly democratic).

28 See Levitsky & Way, supra note 27, at 6 (arguing that a “level playing field” requirement be added to definitions of democracy).

29 See id. at 9-12.

30 For example, by amending constitutions to extend term limits. See Tom Ginsburg et al., On the Evasion of Executive Term Limits, 52 WM. & MARY L. REV. 1807, 1810-13 (2011).

31 See David Landau, Abusive Constitutionalism, 47 U.C. DAVIS L. REV. 189, 200-11 (2013) (giving examples of regimes that have suffered from democratic erosion).

32 See, e.g., Michael Coppedge, Venezuela: Popular Sovereignty Versus Liberal Democracy, in Constructing Democratic Governance in Latin America 179 tbl. 8.5. (Jorge I. Dominguez & Michael Shifter, eds., 2d ed. 2003) (showing that the
express legal authority, he convened a Constituent Assembly, elected through rules that marginalized the opposition, to replace the constitution. The new constitutional order created a more powerful president and allowed Chavez to close down and repopulate existing institutions working against him. With his power consolidated, Chavez was able to push through successive constitutional amendments, most importantly one allowing him to remain in office indefinitely. Chavez’s use of the tools of constitutional change did not eliminate the opposition, but it did allow him to gain significant advantages due to his control of the media, courts, and state patronage, and he was removed from power only with his death.

More recently, in Hungary, the right-wing party Fidesz took power in 2010, again with a bare majority of votes, but because of the voting rules won more than two-thirds of seats in Parliament. With this number, and given the constitutional amendment and replacement rules in the Hungarian constitution, it was able to amend or replace the existing constitution unilaterally. The Fidesz party began by passing a series of constitutional amendments that weakened institutions designed to check its political power, such as the judiciary. A key amendment stripped the Hungarian Constitutional Court, a historically independent and powerful institution, of jurisdiction over laws dealing with fiscal and other important matters. The Fidesz then moved forward with a wholesale replacement of the existing constitution; the new constitution weakens the judiciary and other checking institutions, for example by altering selection traditional parties still controlled clear majorities in Congress after Chavez was elected.

34 See Allan R. Brewer-Carias, Dismantling Democracy in Venezuela: The Chavez Authoritarian Experiment 57-60 (2010) (recounting how the Assembly used an assertion of “original constituent power” to shut down institutions including the Congress and the Supreme Court).
37 See Miklos Bankuti et al., Hungary’s Illiberal Turn: Disabling the Constitution, J. Democracy, July 2012, at 138.
38 See Gabor Halmai, Unconstitutional Constitutional Amendments: Courts as Guardians of the Constitution?, 19 Constellations 182, 192 (2012). The amendment was challenged in front of the constitutional court as an unconstitutional constitutional amendment, but the Court refused to utilize such a doctrine to strike down the amendment. See id. at 194-97.
rules. Many commentators argue that the Fidesz has worked a significant erosion of democracy in Hungary by making itself harder to dislodge and by weakening checks on exercises of power.

2. The Problem of Poorly-Functioning Democracy

Beyond the threat of breakdown, newer democracies may also differ from more mature democracies along a related dimension: they may have systematic deficiencies in political representation, accountability, and capacity. The self-perception of many emerging democratic regimes is not just that they are particularly prone to erosion or breakdown, but also that they do not function well. Representativeness refers to the question of whether elected officials actually push policies favored by their constituents, accountability to the question of whether voters and other institutions can punish political actors who either perform poorly or who exceed their powers, and capacity refers to the ability of political actors to gather information about social problems and to formulate effective policy responses to them. Political scientists tend to attribute some problems along all three dimensions to defects in party systems, and more particularly to two types of systems commonly seen in the developing world: the non-institutionalized party system and the dominant party system.

A non-institutionalized party system is one where parties lack durable roots in society. Thus, within these systems parties turn over quickly, changing their share of the vote and even disappearing with great frequency. Parties in these kinds of systems often have weak or non-existent ideological platforms, with personality replacing policy as a key determinant of votes. Newer party systems in countries that have experienced democratic transitions often have non-institutionalized party systems because organizing stable and coherent

39 See Bankuti et al., supra note 37, at 142-44 (describing the new constitution and its process of approval).
40 See id. at 144.
41 See, e.g., Michael Shifter, Emerging Trends and Determining Factors in Democratic Governance, in CONSTRUCTING DEMOCRATIC GOVERNANCE IN LATIN AMERICA 3, 5-6 (Jorge I. Dominguez & Michael Shifter, eds., 3d ed. 2008) (giving definitions of these terms).
42 For the classic treatment in the political science literature, see Scott Mainwaring & Timothy R. Scully, Introduction: Party Systems in Latin America, in BUILDING DEMOCRATIC INSTITUTIONS: PARTY SYSTEMS IN LATIN AMERICA 1, 4-5 (Scott Mainwaring & Timothy R. Scully, eds., 1995)
43 See id. at 7-8 (comparing the volatility of voting patterns across different Latin American countries).
44 See id. at 5 (noting that in non-institutionalized party systems, “more citizens have trouble locating what the major parties represent even in the broadest terms,” and that these systems undergo frequent “[c]hanges in relative ideological position”).
A DYNAMIC THEORY OF JUDICIAL ROLE

parties is a task that takes time. Parties need to establish internal structures, links with outside groups like unions and business organizations, and a reputation for effectiveness at carrying out a certain political agenda – none of these tasks can be undertaken instantaneously. In the absence of organization, actors form parties around individual personalities or irrelevant issues: a famous example is the Beer Lovers party that formed in Poland following the democratic transition. New democracies like Egypt may thus be relatively unlikely to have institutionalized party systems. Further, party systems can deinstitutionalize even in systems that once had stable and well-defined party systems, particularly where voters lose confidence in the legitimacy of existing political structures. Colombia and Venezuela offer two examples from recent Latin American history where once institutionalized party systems dissolved, leaving a vacuum. 

Non-institutionalized party systems lead to problems of representation because the absence of clear platforms or durable parties obscures links between voters and elected officials, and thus policy made by elected officials need not represent the public will. Further, they may lead to accountability problems, primarily because elected officials are not rooted in strong party organizations. For example, presidential or semi-presidential regimes with non-institutionalized party systems tend to elect outsiders as chief executives, and these outsiders may

45 See Samuel Huntington, Political Order in Changing Societies 422-25 (1968) (arguing that party systems are often weak and non-institutionalized in new democracies).

46 See, e.g., Stanislaw Gebethner, Parliamentary and Electoral Parties in Poland, in Party Structure and Organization in East-Central Europe 121, 122 (Paul G. Lewis, ed., 1996) (attributing the moderate success of the Beer Lover’s party to pervasive distrust of any political party following the fall of socialism).

47 See, e.g., Marwan Muasher, The Path to Sustainable Political Parties in the Arab World, Nov. 13, 2013, available at http://egyptelections.carnegieendowment.org/2013/11/14/the-path-to-sustainable-political-parties-in-the-arab-world (noting the difficulty that new Egyptian parties have had in getting organized, and noting the asymmetry between the newer parties, which are disorganized, and forces like the Muslim Brotherhood, which have had a long time to organize).

48 In Colombia, a stable two-party system broke down in the 1990s as voters became disenchanted with traditional political institutions: an institutionalized party system was replaced with an inchoate party system with personalist parties. See Eduardo Pizarro Leongomez, Giants with Feet of Clay: Political Parties in Colombia, in The Crisis of Democratic Representation in the Andes 78-79 (Scott Mainwaring et al., eds., 2013). In Venezuela, a similarly stable two-party system imploded quickly and was replaced with a vacuum that was filled by Hugo Chavez and his movement. See Michael Coppedge, Venezuela: Popular Sovereignty versus Liberal Democracy, in Constructing Democratic Governance in Latin America 167, 182-83 (Jorge I. Dominguez & Michael Shifter, eds., 2d ed. 2003).

49 See Mainwaring & Scully, supra note 42, at 5 (noting that non-institutionalized party systems lack strong “linkages between citizens and parties”).
be difficult for either legislatures or other institutions like courts to control.\textsuperscript{50} The relatively recent cases of Uribe in Colombia, Chavez in Venezuela, Correa in Ecuador, and Fujimori in Peru all demonstrate how non-institutionalized or deinstitutionalizing party systems tend to produce political outsiders as presidents, and how these outsiders may threaten at least horizontal mechanisms of political accountability.\textsuperscript{51} Finally, non-institutionalized party systems may be correlated with weaknesses in capacity. This is easiest to see in the case of legislatures: a legislature composed of small, personalist parties and high turnover is unlikely to develop the expertise to either develop policy or to supervise the executive’s initiatives.\textsuperscript{52} In the term used by Daryl Levinson, a legislature in a non-institutionalized party system is more likely to seek to “abdicate” its powers than to “empire build.”\textsuperscript{53}

Dominant-party systems form a second, somewhat different kind of problem common in the developing world.\textsuperscript{54} In these systems, a single party tends to win most elections. This is a common problem: Mexico was a dominant-party system for most of the prior century, India had this kind of system for much of its democratic history, South Africa – along with much of the rest of Africa – has this kind of system today, and Turkey may be evolving into such a system.\textsuperscript{55} These systems emerge where the organizational problems left unresolved in the non-institutionalized system case are resolved, but in an

\begin{itemize}
\item \textsuperscript{50} See Guillermo O’Donnell, \textit{Delegative Democracy}, J. DEMOCRACY, Jan. 1994, at 55, 60 (noting how elected presidents operating in non-institutionalized party systems sometimes run on platforms where they put themselves above politics and outside of political parties).
\item \textsuperscript{52} See, e.g., Scott Morgenstern, \textit{Explaining Legislative Politics in Latin America, in LEGISLATIVE POLITICS IN LATIN AMERICA} 413, 431 (arguing and providing evidence for the proposition that “only cohesive opposition parties (or coalitions) with majority control will have the means, method, and incentive to assert legislative authority”).
\item \textsuperscript{53} See Daryl Levinson, \textit{Empire-Building Government in Constitutional Law}, 118 HARV. L. REV. 915 (2005) (noting that the assumption that political institutions are out of expand their power rather than abdicate is an often-false assumption even of United States constitutional law).
\item \textsuperscript{54} For an overview to the theoretical issues within the particular context of South Africa, see Sujit Choudhry, \textit{“He Had a Mandate”: The South African Constitutional Court and the African National Congress in a Dominant Party Democracy}, 2 CONST. CT. REV. 1, 8-23 (South Africa) (2009).
\item \textsuperscript{55} See generally Hermann Giliomee & Charles Simkins, \textit{The Dominant Party Regimes of South Africa, Mexico, Taiwan, and Malaysia: A Comparative Assessment, in THE AWKWARD EMBRACE: ONE-PARTY DOMINATION AND DEMOCRACY} 1 (Hermann Giliomee & Charles Simkins, eds., 1999) (giving an overview of these different regimes).
\end{itemize}
asymmetric way: one party or movement grabs most of the organizational resources.\footnote{See, e.g., LEVITSKY & WAY, supra note 27, at 56 (noting that hybrid regimes, which usually consist of one-party dominant regimes, are a solution to problems of political disorganization, and themselves rely on organization to survive).} Once established, these sorts of systems may be difficult to dislodge because the incumbents will gain enormous advantages in terms of resources and organization over their opponents.\footnote{See id. at 9-12.}

Thus, dominant-party systems again raise challenges along the three dimensions of representation, accountability, and capacity. There is a possibility that some groups of voters not part of the coalitions for the winning party will get permanently frozen out: the dominant party has no incentive to represent their interests, and opposition groups will be unable to do so.\footnote{See, e.g., Giliomee & Simkins, supra note 55, at 40-41.} Further, the fact that the same party is virtually guaranteed to win every election may weaken the accountability between political leaders and voters; a party virtually guaranteed to win the next election has fewer incentives to pay attention to even the voters composing its coalition.\footnote{See Steven Friedman, No Easy Stroll to Dominance, in THE AWKWARD EMBRACE: ONE-PARTY DOMINATION AND DEMOCRACY 97, 106-07 (Herman Giliomee & Charles Simkins eds., 1999).} The dominance of a single party will also lead to predictable problems with horizontal accountability: control institutions like ombudsmen and comptrollers may be packed by members of the dominant party rather than having the necessary independence.\footnote{See, e.g., Samuel Issacharoff, The Democratic Risk to Democratic Transitions, 5 CONST. CT. REV. ___ (South Africa) (forthcoming 2014) (noting the ways in which the dominant-party ANC in South Africa is able to undermine institutions that are supposed to check it).} Finally, these systems may beget problems of bureaucratic capacity, in some cases by allowing corruption to flourish and to influence appointments and behavior with the bureaucracy.

It is important to note that serious problems of representation, accountability, and capacity often exist even without these particular configurations in party systems. Capacity, for example, is often weak in newer democracies just because it takes considerable time and resources to build up competent bureaucrats. And pervasive problems of corruption, which run across a large number of less mature democracies, impact the quality of representation and the extent of accountability by weakening the links between voters and officials and by allowing officials to weaken horizontal checks on their power.\footnote{See, e.g., Kanybek Nur-tegin & Hans Czap, Corruption: Democracy, Autocracy, and Political Stability, 42 ECON. ANAL. & POL’Y 51 (2012) (finding that levels of corruption in unstable democracies are high, although lower than in autocratic regimes).}

3. The Problem of Constitutional Culture
Finally, many theories of American constitutionalism rest at base on the notion that the “people” care about the constitution and its meaning – in other words that the constitution is taken seriously as an object of social and political discourse. This conception obviously lies at the root of the “popular constitutionalist” movement in the United States. The main animating principle of this movement is that at least some power of constitutional interpretation should be taken away from the judiciary and given to the people, either exercised directly or through their political representatives.62 Yet as Tushnet points out, this idea that constitutional principles should be realized in the political realm, rather than through judicial elaboration, requires an assumption that members of the public themselves care about constitutionalism.63 Much of the case for reining in judiciaries in the name of popular constitutionalism depends, then, on the existence of constitutional culture.

This assumption is very plausible in the United States, which has a long history of carrying on political disputes as fights about the meaning of the constitution.64 Some other mature democracies (although not all) have similarly robust constitutional cultures.65 But – although systematic empirical study is oddly almost non-existent – the assumption seems to break down in most new democracies. Some of these systems are new to democratic constitutionalism and thus have little history or experience internalizing constitutional values. Others have a history of living under “sham constitutionalism” – documents that purported to create liberal democracies, but in fact were honored in the breach.66 Finally, some have experienced a dizzying array of constitutions in succession,

62 See, e.g., LARRY KRAMER, THE PEOPLE THEMSELVES: POPULAR CONSTITUTIONALISM AND JUDICIAL REVIEW (2004) (arguing for a version of departmentalism, where each branch of government would have its own power of constitutional interpretation); MARK TUSHNET, TAKING THE CONSTITUTION AWAY FROM THE COURTS (2000) (arguing that the development of constitutional meaning should be left primarily in the hands of political rather than judicial actors); Tom Donnelly, Making Popular Constitutionalism Work, 159 WISC. L. REV. 159 (2012) (searching for ways to allow popular constitutionalism to be implemented as part of a practical reform program in the United States).

63 See Tushnet, supra note 16, at 2255.

64 For an account of the construction of this constitutional culture in the first generation of the independent United States, see Jason Mazzone, The Creation of a Constitutional Culture, 40 TULSA L. REV. 671 (2005) (describing how civic associations served as a key agent for inculcating constitutional values to ordinary people).

65 In Germany, for example, recent scholarship has traced the rise of “constitutional patriotism in the post-war period. See Jan-Werner Muller, On the Origins of Constitutional Patriotism, 5 CONTEM. POL. THEORY 279 (2006) (arguing that Germans view their constitution as the “focal point of democratic loyalty”).

66 See David S. Law & Mila Versteeg, Sham Constitutions, 101 CAL. L. REV. 863 (2013) (measuring the match between constitutional text and actual compliance with constitutional norms, and finding the highest levels of divergence in Asia and Africa).
A DYNAMIC THEORY OF JUDICIAL ROLE

with none of the texts seeming to have much meaning or real-world impact. Constitutions in these circumstances still play valuable functions. They may, for example, help elites solve coordination games involving which actor gets to wield which type of power. But they are not likely to serve as a widely-known source of national values, at least not initially.

The typology of different dysfunctions outlined in this section suggests a series of independent but related problems with democratic functioning. First, newer democracies often suffer from very high risks that political action will endanger democracy itself – they are particularly fragile. Second, newer democracies often have political institutions that do not effectively channel the will of the people – they are poorly-functioning. And third, the public itself often does not care much about constitutional meaning and will therefore presumably not pressure political actors into making decisions based on constitutional meaning. It would be strange if these problems, put together, did not have some bearing on a normative theory of judicial role.

B. Judicial Perception and Constitutional Design in Dysfunctional Democracies

Moreover, scholars and judges working on developing countries routinely cite and rely on a perception that their own political orders are not well-functioning, and constitutional designers often rely on this assumption in developing. Judges (as well as citizens and constitutional designers) can and often do overstate the problems with their own political systems. But the fact that both judges and constitutional designers recognize defects in their own political systems would seem again to be relevant to a conception of judicial role.

The Indian and Colombian high court judges have been particularly clear in this regard. In Colombia, Constitutional Court justices openly treat the weaknesses in political institutions – and particularly in the Congress – as a justification for the protagonist’s role that the Court has taken on within political life. In one famous decision striking down a national security law because of weaknesses in democratic deliberation, the Court complained that the Congress “should be” a “space of public reason;” in another case striking down a tax

reform, the Court noted that a measure expanding the VAT tax to basic necessities had not been the product of “a minimum of rational deliberation.”\footnote{See Decision C-776 of 2003, §4.5.6.1, available at http://www.corteconstitucional.gov.co/relatoria/2003/c-776-03.htm.} One justice, pointing across the main square in Bogota from the Constitutional Court, told me that the Court, rather than the Congress, is the center of public protest, because the Court “has more relevance to people’s lives.”\footnote{Interview with Constitutional Court Justice, Bogota, Colombia, Aug. 2009.}

Likewise, Nick Robinson argues that the Indian Supreme Court’s perception of systematic problems in elected democratic institutions has led it to seek an expanded mandate and to become a kind of “good governance court.”\footnote{See Nick Robinson, Expanding Judiciaries: India and the Rise of the Good Governance Court, 8 WASH. U. GLOB. STUD. L. REV. 1, 8-16 (2009).} For example, Justice Balakrishnan stated that arguments in favor of judicial restraint “fail[] to recognize the constant failures of governance taking place at the hands of the other organs of State, and that it is the function of the Court to check, balance and correct any failure arising out of any other State organ.”\footnote{Id. at 16-17.} In both of these systems, the judges are giving voice to broadly-felt perceptions about the low quality of democratic institutions.

The perception of inadequate or flawed representative institutions is more than a principle that informs judicial attitudes: it is a core principle of constitutional design across a range of new democracies. First, it drives a relatively “thick” approach to constitutional drafting. Constitutional framers in new democracies often write lengthy constitutions detailing a large number of rights and delving deep into the details of constitutional structure and functioning. While some commentators view these kinds of constitutional texts as aberrational or as improper constitutions, Scheppel notes that they seem to be a rational reaction to the distrust of democratic institutions.\footnote{See Kim Lane Scheppele, Parliamentary Supplements (or Why Democracies Need More than Parliaments), 89 B.U. L. REV. 805 (2009) (noting that modern constitutions are often thick documents, providing a series of restraints on both elected representatives and on the checking institutions themselves).} Adopting detailed texts is a way to hem in and limit the power of democratic actors.

Moreover, distrust of democratic institutions leads constitutional designers to create a series of independent institutions designed to check and control elected actors. That is, while judicial review has become a standard institution almost everywhere, constitutional designers in newer democracies have found that judicial review alone is not enough.\footnote{See Bruce Ackerman, The New Separation of Powers, 113 HARV. L. REV. 633, 687-88 (2000) (calling on constitutional theorists to think about the possibility for institutions beyond parliaments and courts).} They thus also create other institutions, like anticorruption commissions, ombudsmen, electoral courts and commissions, human rights commissions, independent prosecutors, independent...
comptrollers, etc. The proliferation of these institutions is one of the most important – and least studied or understood – trends in constitutional design. In one of the few articles to study the trend, Christopher Elmendorf argues that these independent non-judicial institutions act as advisory counterparts to constitutional courts. In other words, they soften the tension between democracy and judicial review by placing review-like powers with institutions that lack the coercive powers of courts. Elmendorf’s classification accurately describes the functioning of some of these institutions, especially in the developed world. But in many cases, these non-judicial independent agencies have as sweeping a set of powers (within their designated domain) as constitutional courts. For example, anti-corruption commissions often have full powers to remove and prosecute public officials. Electoral courts and commissions can often take independent action to determine elections and to sanction wrongdoing. Moreover, these independent institutions are often designed in addition to – rather than as a replacement for – an activist constitutional court. This has been the pattern, for example, in systems as diverse as Hungary, India, and Colombia. This suggests that rather than viewing these institutions as a replacement for the constitutional court, they should be seen as complementary institutions that can enhance the effectiveness of democratic governance.

75 See Schepple, supra note 73, at 823-24 (discussing the different kinds of institutions that are found in modern constitutions in the developing world); see also Kim Lane Schepple, Democracy by Judiciary. Or, why Courts can be More Democratic than Parliaments, in RETHINKING THE RULE OF LAW AFTER COMMUNISM 25, 37-38 (Adam Czarnota et al., eds., 2005) (linking the adoption of thick constitutions and the rise of independent checking institutions to distrust of democracy in the post-communist states).

76 See Ackerman, supra note 74, at 688 (noting that this area is one where “the creative potential of constitutional law has been egregiously underappreciated”).

77 See Christopher Elmendorf, Advisory Counterparts to Constitutional Courts, 56 DUKE L.J. 953, 955 (2007) (noting that many of these institutions have purely advisory powers, although others may have some coercive powers).

80 See Robinson, supra note 71, at 17 (noting that the founders of Indian democracy “set up a series of independent unelected bodies,” including a national election commission, comptroller, finance commission, auditor general, and public service commissions at all levels of government, as well as a powerful court); Schepple, supra note 75, at 40 (discussing the Court and other checking institutions in Hungary, as a response to democratic distrust); David Landau, Political Institutions and Judicial Role in Comparative Constitutional Law, 51 HARV. INT’L L.J. 319, 338-39 (2010) (noting that the Colombian Constitution of 1991 created powerful
institutions as a way to weaken the checks placed on democratic officials, they should instead be viewed as an additional manifestation of democratic distrust.

C. Dysfunctional Democracy and a Dynamic Theory of Judicial Role

The three facts laid out in the previous sections – that newer democracies often do have defects of various predictable types, that judges and broader social actors identify these defects and view them as relevant, and that distrust towards democracy is important to constitutional designers in many new democracies – seem important for a theory of judicial role. Moreover, constitutional theory itself confirms the point, by requiring assumptions like well-functioning political institutions or robust constitutional cultures before the standard conclusions hold. The key question is what conclusions courts should draw from these facts. Based on judicial practice and scholarly rhetoric, there would seem to be at least three possibilities.

First, some strains of practice suggest an “institutional replacement” theory, where courts take the failure of existing democratic institutions as a mandate to replace those institutions and carry out some or all of their tasks. There are strains of such an approach, for example, in both Indian and Colombian constitutional practice. Courts, for example, may seek links directly with the populace if they feel that legislatures are not playing this role, or they might seek to make policy directly if they feel that other institutions are not willing or capable of doing so. Judicial action under this conception would be permissible when the court steps in and carries out activity that the political branches themselves either cannot do or cannot do well.

As a theory of judicial role, this replacement approach is problematic for several reasons. First, it invites judges to overstate the differences between never democracies and mature democracies. Virtually all democratic systems may have serious problems in their quality of representation, and the differences between systems are better referred to as differences in degree rather than in kind. Further, judiciaries lack the capacity to replace most of the core functions of well-functioning legislative or bureaucratic officials. The functional lines between courts and other political actors are malleable, but they do exist. In institutions like a Comptroller and Human Rights ombudsman, as well as a powerful Constitutional Court, because of “a suspicion that existing structures would not adequately enforce the Constitution and transform Colombian society”).

81 See supra text accompanying notes 15-16 (noting the assumptions underlying the theories of Jeremy Waldron and Mark Tushnet).

82 See Robinson, supra note 71, at 16-17 (quoting the statements of some justices who implied that extreme judicial activism was justified by poor political performance); Landau, supra note 80, at 345-47 (noting some of the same tendencies on the Colombian Constitutional Court).

83 In the socio-economic rights context, for example, few scholars deny that there are real differences in judicial versus legislative or executive capacity to make complex policy choices. See, e.g., CASS SUNSTEIN, DESIGNING DEMOCRACY: WHAT
other words, the fact that political institutions are widely perceived as incapable of carrying out certain tasks does not automatically render courts the proper forum for doing so. Institutional failure creates a vacuum, but not necessarily one that courts can legitimately fill.

Finally, the replacement theory is heedless to the dynamic effects of judicial intervention: it would appear to abandon problematic democracies to a permanent state of dysfunction. Further, it would view that permanent dysfunction as a durable mandate for extraordinary judicial intervention. This view is eerily similar to one long promoted in Latin America, where the supposed absence of democratic values or well-functioning political systems was taken to allow strong presidencies to rule via emergency powers or states of siege. The use of these emergency powers in turn may have helped to perpetuate abnormality by weakening the development of legislative institutions and constitutional values.

A second possible focus for a theory of judicial role would be the process of constitutional transformation itself. It has become commonplace to note that constitutions in new democracies are often “transformational” rather than “preservative.” Transformative constitutionalism seeks to remake a country’s (supposedly deficient) political and social institutions by moving them closer to the sets of principles, values, and practices found in the constitutional text. One might argue that judges in poorly-functioning political systems should focus on realizing the constitutional project. Under such a conception, judicial action would be permissible if it helped to move politics and society closer to the

---

85 See Schor, supra note 67, at 19 (“Excessive presidential power led to greater, not less, unrest as the transition from a government of men to one of laws became impossible.”).

86 Transformative constitutionalism is itself a vague concept, but has been defined as “a long-term project of constitutional enactment, interpretation, and enforcement committed … to transforming a country’s political and social institutions and power relationships in a democratic, participatory, and egalitarian direction.” See Karl E. Klare, Legal Culture and Transformative Constitutionalism, 14 S. Afr. J. Hum. RTS. 146, 150 (1998). More broadly, we might define transformative constitutional in opposition to preservative constitutionalism: the latter takes a relatively static perspective and seeks to “maintain existing practices and ensure that society does not regress,” while the former seeks substantial transformations in the status quo. See Micah Zeller, From Preservative to Transformative: Squaring Socioeconomic Rights with Liberty and the American Constitutional Framework, 88 Wash. U. L. Rev. 735, 743 (2011).
constitutional ideal and impermissible if it either moved politics and society further away from the constitutional ideal or was unrelated to that goal.

A constitutional transformation approach and the democracy-improving approach studied in this article share a dynamic focus; they are perspectives from within the same family of theories. But the primary flaw with a constitutional transformation theory is that it elides the question of which institution is tasked with the process of constitutional transformation, or rather answers that question by assuming that the process of constitutional transformation should be judge-led. Constitutional mandates are contestable; they are open to interpretation. As Waldron argues, it is often more reasonable to have democratic processes rather than courts make determinations about constitutional meaning. 87 Waldron’s objection need not fatally undermine all variants of a constitutional transformation theory. It may be that courts are on solid ground in trying to realize important constitutional mandates in cases where the political branches wholly ignore those mandates. But it does suggest that the task of constitutional transformation should be viewed as a second-best to the task of improving political institutions themselves.

This leaves the possibility that courts in new democracies should devoting some part of their energy to improving the performance of democratic institutions through time. In other words, courts should play at least a modest role in making abnormal institutions function more normally. This simple formulation, of course, hides a potentially rich agenda and a variety of different tasks. Courts might, for example, aim to make democratic institutions more robust by protecting them from democratic erosion, 88 or they might aim to correct some of the defects inherent in non-institutionalized or dominant party systems. 89 Courts might also attempt to build up civil society where it has historically been weak, or to construct constitutional cultures in citizens where they do not initially exist. 90 The following sections explore these possibilities in more detail.

Such a theory of judicial role builds on existing work in constitutional theory, particularly political-process theory. 91 It is plausible that courts across a range of political orders spend some of their energy on improving democratic institutions; the dysfunctions may be more sweeping in many of the “Global South,” providing for example failures in responsiveness even to majoritarian will. It thus suggests that judicial review in new democracies is not exactly the same task as judicial review in mature democracies, but it is in the same universe.

A dynamic theory also makes sense of recent trends in constitutional design, judicial behavior, and scholarship. As the next section will show, both courts and other institutions in new democracies do make efforts to protect

87 See Waldron, supra note 12, at 1366-69.
88 See infra Part II.A.
89 See infra Part II.B.
90 See infra Part II.C.
91 See supra text accompanying notes 13-14.
A DYNAMIC THEORY OF JUDICIAL ROLE

democratic orders, to correct for weaknesses in party systems, and to build civil society and constitutional culture. Further, recent scholarly work has emphasized the dynamic effect that courts might have in new democracies. Samuel Issacharoff, for example, in recent work on Turkey, India, and South Africa emphasizes the role that courts can play both in protecting democracies from erosion and in improving the performance of dominant-party systems. And Katharine Young, in a comprehensive book on the enforcement of socioeconomic rights in the developing world, argues that courts should aim to play a “catalytic role,” in particular focusing on empowering civil society groups in contexts where they have historically been weak.

Finally, a dynamic theory is flexible, consistent with a range of specific judicial tasks. Its main value is in suggesting a somewhat different set of questions for evaluating exercises of judicial power. Take, for example, a structural injunction case involving the right to food, like the massive and ongoing case in India. Conventional constitutional theory tends to ask a stock set of questions about these interventions. For example, a key question would generally be whether the intervention is justified by extraordinary circumstances, such as if it benefitted a minority group wholly excluded from the political process. But such a question may make little sense in a poorly-functioning political system, where the popular assumption is that the government serves most groups badly, including middle-class groups that would normally be expected to have a voice. Conventional constitutional theorists would also ask whether the court is extra-limiting by taking on essentially legislative tasks, reaching beyond its capacity and legitimacy. But this assumption of fixed

---

92 See Issacharoff, supra note 25 (surveying and justifying aggressive interventions in the electoral sphere within “fragile democracies” like Turkey and India); Issacharoff, supra note 60 (finding some success for the South African Constitutional Court in ameliorating the negative excesses of a dominant-party system).

93 See Katharine G. Young, A Typology of Economic and Social Rights Adjudication: Exploring the Catalytic Function of Judicial Review, 8 INT’L J. CONST. L. 385 (2010) (proposing that courts enforcing socio-economic rights focus on catalyzing change by, for example, strengthening civil society and its leverage over the state).

94 In particular, it does not require that one make global choices between thinner conceptions of democracy, focusing mostly on clean elections, and thicker conceptions focusing also on democratic deliberation. See, e.g., RICHARD POSNER, LAW, PRAGMATISM, AND DEMOCRACY 130-57 (2003) (defining and exploring different conceptions of democracy).

95 For a fuller exploration of this case, see infra Part II.C.

96 See supra text accompanying note 13 (discussing political-process theory).

97 See, e.g., Waldron, supra note 12, at 1406 (stating that legislatures rather than courts are the best place to resolve contested issues about the interpretation of rights); ADRIAN VERMEULE, JUDGING UNDER UNCERTAINTY 230 (2006) (arguing that institutionally, legislatures are better at updating constitutional meaning than courts).
differences between legislative and judicial roles again may make little sense to judges and citizens in many new democracies, because it suggests that courts should defer to institutions that are themselves functioning poorly.

A dynamic perspective would instead focus on a set of questions that may prove more useful, or at least that might supplement those found in conventional theory. Aggressive interventions like those involved in the Indian case might be justifiable if they help to build up the strength of civil society, the density of constitutional culture, and the capacity of the bureaucracy. On the other hand, they would be harder to justify if they tended to slow or reverse improvements in the quality of political institutions through time, perhaps by diverting citizens’ attention and resources away from representative institutions and towards courts. The point is not that anything is justifiable from a dynamic perspective, but that the reasons why a given intervention might or might not make sense are somewhat different from those found in conventional constitutional theory.

II. A TYPOLOGY OF DYNAMIC EXERCISES OF JUDICIAL REVIEW

The conception that exercises of judicial review should be forward-looking and aimed at improving the performance of political institutions through time has become ingrained in the practices of courts in newer democracies. This section assembles evidence that such a conception exists, and classifies exercises of judicial review into three main camps: efforts to ensure democratic survival, efforts to build up democratic institutions and to fix problems with political systems, and efforts to work around existing political institutions by opening up alternative spaces of democratic contestation. The evidence is drawn primarily, but not exclusively, from three of the most canonical and most studied judiciaries in the developing world: South Africa, Colombia, and India.

Beyond description and classification, this part demonstrates that a dynamic perspective on judicial review is helpful in raising questions for evaluating the exercises of judicial review surveyed here. That is, a dynamic perspective on judicial review is not a blank check for courts in the developing world, but instead suggests a different set of limitations on constitutional courts than those found in traditional constitutional theory. I treat these questions, and potential responses to them, in a more complete way in Part III.

A. Preserving Democracy and Protecting Against Abusive Constitutionalism

Legal scholars and constitutional designers have envisioned a number of different responses to the threat of democratic erosion. As noted above in Part I, new democracies are often viewed as particularly vulnerable to backsliding into a variant of authoritarianism. I discuss two of these institutions here: the militant democracy model, which allows courts to ban problematic parties, and judicial
control of the use of the tools of constitutional change. Both of these institutional
designs and legal doctrines appear to rest on skepticism about whether
maneuvers with significant political or popular support at a given point in time
actually reflect the durable popular coalition that should be involved in large-
scale political change; in other words, they reflect skepticism about the quality
of democracy at the present. The argument is that it is relatively easy for a
political force or leader to leverage a temporary spike in popularity and to make
it appear to be a durable mandate for sweeping change.98 Further, certain types
of constitutional change can do lasting damage to a political system, putting a
regime on a less democratic path indefinitely.99 Put together, these two factors
justify extraordinary restrictions on democracy in the present, in the name of
preserving and improving it for the future.

The oldest of these mechanisms, the “militant democracy” conception
developed in post-war Germany, focuses largely on the banning of parties who
pose a threat to the democratic order, a power normally placed in Constitutional
Courts.100 The idea is that parties who are clearly anti-democratic, and which
have anti-democratic ends, should not be able to come to power from within the
democratic order. The model for this practice, of course, is the interwar Weimar
Republic, where the Nazis came to power largely using democratic means,
beginning as a very small party and gaining strength for their anti-system
ideology as the major parties failed to stabilize the economy and government.101
The key question is whether banning parties is a helpful response for preserving
democracy, particularly against the modern threat of democratic backsliding into

98 See, e.g., William Partlett, The Dangers of Popular Constitution-Making, 38
BROOK. J. INT’L L. 193 (2012) (finding based on a study of Eastern European and
post-Soviet states that certain models of constitution-making “have helped
charismatic presidents unilaterally impose authoritarian constitutions on society”);
David Landau, Constitution-Making Gone Wrong, 64 ALA. L. REV. 923, 936 (2013)
(noting that in many instances of constitution-making, there is a significant risk that
powerful actors will use the moment to entrench their power); Ozan Varol,
Temporary Constitutions, 101 CAL. L. REV. ___ (forthcoming 2014) (arguing that
the use of temporary constitutions can ameliorate some of the risks of groups taking
advantage of moments of constitutional change to entrench their own power).
99 See, e.g., David Landau, Abusive Constitutionalism, 47 U.C. DAVIS L. REV. 189
(2013); Partlett, supra note 98 (finding that the shape of constitution-making
processes had lasting effects on constitutional orders).

constitution of the Weimar Republic).
a competitive authoritarian or hybrid regime. Some evidence – admittedly limited – suggests that it may not be.

More recent work in constitutional theory has focused instead on designing the tools of constitutional change so as to be robust against the threat of abuse. Constitutional designers in recent constitutions have often created tiers of constitutional amendment in the text itself, making certain sensitive provisions either particularly difficult or even impossible to change. For example, the Honduran constitution makes its one term limit on presidential terms unamendable, and penalizes even proposals to change that provision. Less dramatically, the South African constitution requires increased supermajorities for some kinds of constitutional changes as opposed to others. One possible purpose of these kinds of tiered provisions is to protect constitutional norms, like term limits, that are particularly likely to be abused and to lead to democratic erosion.

In an increasing number of countries, courts have invented this doctrine on their own, arguing that the “basic structure” or “fundamental principles” of the constitution may not be changed by amending the constitution. This doctrine of unconstitutional constitutional amendments is, for most American lawyers, a stunning display of judicial overreach, but it has been adopted by courts in countries including India, Colombia, Brazil, Pakistan, Bangladesh, Nepal, Portugal, the Czech Republic, Taiwan, and Peru. Uses in Colombia and India suggest that it may have a least limited value in protecting democracy against some kinds of threats.

102 See Richard Albert, Constitutional Handcuffs, 42 ARIZ. ST. L.J. 667, 708-09 (2010) (noting and recommending the use of constitutional tiers with higher supermajorities as an alternative to making some provisions completely unamendable).

103 See, e.g., Rosalind Dixon & Vicki Jackson, Constitutions Inside Out: Outsider Interventions in Domestic Constitutional Contests, 48 WAKE FOREST L. REV. 149, 176-78 (explaining the design of the Honduran constitution and its role in provoking a constitutional crisis and military coup in 2009).

104 See S. AFR. CONST. 1996, art. 74 (requiring that most amendments receive only a two-thirds majority of Parliament and in some cases super-majority approval of the National Council of Provinces, but requiring a three-quarters majority of Parliament for amendments to Chapter 1 of the Constitution).

105 This was precisely the use of the unamendable provision in Honduras. See Dixon & Jackson, supra note 103, at 176-78.

106 See, e.g., Yaniv Roznai, Unconstitutional Constitutional Amendments: The Migration and Success of a Constitutional Idea, 61 AM. J. COMP. L. 657, 659 (2013) (noting that the issue of unconstitutional constitutional amendments has already been litigated in “numerous countries”).

107 See id. at 677-99 (giving an overview of usage across a broad range of countries).

A DYNAMIC THEORY OF JUDICIAL ROLE

The case of institutions designed to protect the survival of fragile democracies raises perhaps the most dramatic conflict between traditional constitutional theory and the dynamic approach. Both party-banning and the unconstitutional constitutional amendments doctrine are very difficult to square with most standard approaches to constitutional theory, because they involve extraordinary restrictions on the democracy of the present. The “militant democracy” model of party banning reduces the scope of political competition and prevents some political forces from contesting political office. And the unconstitutional constitutional amendments doctrine prevents even large super-majorities from carrying out certain political changes without either packing the court or, perhaps, by conducting a wholesale constitutional replacement. But both emerge as potentially vital tools to protect and preserve the democracy of the future; thus a dynamic perspective emerges as the best potential defense of both doctrines.

B. Working to Improve Democratic Institutions

Beyond preserving democracy, courts also focus in some cases on improving the performance of democratic institutions through time. The sheer number of possible approaches makes it impossible to give a complete accounting here. Instead, I focus on giving examples of approaches that have been used in two well-studied political systems: the approaches of the Colombian Constitutional Court, which has focused on problems found in a non-institutionalized party system with a correspondingly overreaching executive, and the approaches of the South African Constitutional Court, which has focused on problems found within a dominant party system.

1. Colombia and Deinstitutionalized Party Systems

There are yet more dramatic examples of such a conflict. Some scholars have called for a constitutional role for the military as a protector of democratic stability in fragile regimes. See Ozan O. Varol, The Military as the Guardian of Constitutional Democracy, 51 Colum. J. Transnat’l L. 547 (2013) (arguing that militaries can at time promote rather than hinder democratic development in fragile regimes). The key to the logic is the observation that a military role in the constitutional order need not be antithetical to democracy; under some conditions militaries have promoted democratization. The military may in fact be especially effective at defending against threats of democratic erosion from within: judicial decisions may be ignored (or judiciaries packed), but military power is much more difficult to evade. See id. at 579-80 (noting that judicial decisions can more easily be ignored). Turkey, where the military had a long history of stepping in to protect the democratic order against the perceived threat of Islamist political forces, is often held up as a model for this type of constitutional design, and some have argued for a similar role for the military in the emerging regimes of the Arab Spring, especially Egypt. See id. at 597-605 (Turkey); 617-25 (Egypt).
The Colombian Constitutional Court is faced with a party system that is often viewed as deinstitutionalized.\textsuperscript{110} Parties are weak, turn over frequently, and lack clear policy platforms. Further, the Colombian Congress is widely viewed as corrupt, with legislators more interested in achieving personal gain for themselves or their backers than in pursuing national policy initiatives.\textsuperscript{111} The result of these two factors has been a Congress that is very weak in carrying out the core functions of lawmaking or checking executive power. This legislative weakness is matched by a correspondingly very powerful president that is largely unchecked by other elected officials.\textsuperscript{112} The Court and other actors within the political system, broadly speaking, have taken two approaches to these mirror-image problems: they have sought to improve the performance of the weaker institution (the Congress) by cleansing it and by attempting to force it to become more interested in policy, and they have sought to close the accountability gap by essentially replacing the congressional role in checking an overreaching executive.

Colombian institutions have, first, responded to the perceptions of corruption in the Colombian system in the simplest way imaginable: by seeking to oust corrupt or incompetent officials. The Colombian constitution includes a number of institutions aimed at removing and jailing politicians, particularly legislators, which are perceived by the population as hopelessly corrupt and ineffective. A Procuraduria [Attorney General] has the power to discipline, remove, and impose future political bans on elected and non-elected actors for a wide range of faults; the Prosecutor’s Office has the power to recommend criminal charges to the Criminal Chamber of the Supreme Court, which can jail high officials; the Comptroller audits state institutions regularly and broadly.\textsuperscript{113} Other constitutional designs in new democracies tend to have similarly robust sets of institutions charged with cleansing politics.\textsuperscript{114}

These control institutions have had an incredible impact on Colombian politics: in the 2006-2010 term about one-third of all elected congressmen were investigated and over fifteen percent actually jailed for their links to paramilitary forces.\textsuperscript{115}

\begin{thebibliography}{9}
\item \textsuperscript{110} See, e.g., Eduardo Pizarro Leongomez, \textit{Giants with Feet of Clay: Political Parties in Colombia}, in \textit{The Crisis of Democratic Representation in the Andes} \textit{78}, 80 (Scott Mainwaring et al., eds., 2006) (stating that the Colombian party system was going through a “rapid de-institutionalization process”).
\item \textsuperscript{111} See \textit{id.} at 91-93 (explaining how the deinstitutionalized party system and other factors impact the behavior of the Colombian Congress).

\end{thebibliography}
groups. Most of these investigations were based on allegations of links or dealings with paramilitary groups. And the theories of removal sweep well beyond criminal matters and outright corruption. This past year, for example, the national Attorney General utilized his broad autonomous power to remove the elected mayor of Bogota, Gustavo Petro, on the grounds that Petro had handled a proposed shift from private to public garbage vendors in a thoroughly incompetent manner. Petro was also banned from future participation in politics for fifteen years. Importantly, the allegations against Petro were not based on corruption, but on poor performance. In the aftermath of the Petro removal, some commentators referred to the national Attorney General – an unelected institution charged with monitoring politicians and bureaucrats – as the most powerful person in the country.

Beyond cleansing, the Court and its allied institutions have also sought to improve the legislative performance of the Congress. For example, they have imposed strict limits on the kind of lawmaking power that the Congress can delegate to the president, a species of non-delegation doctrine. Similarly, the Colombian Court has attempted to improve the quality of legislative deliberation by constitutionalizing some issues of legislative procedure. When the legislature fails to debate a key issue at all stages of debate, for example because a provision is added as part of an amendment very late in the legislative process, the Court will strike down the resulting law.

A textbook example of the Court’s attempts to “fix” the Congress come out of a critically-important 2003 case where the Court examined the constitutionality of a legislative amendment that formed part of then-President

---

117 See id. (noting that the core allegation was that Petro had made “serious mistakes in his handling of the botched transfer of garbage collection from private contractors to a government-run service).

120 This is called the “elusion of debate” doctrine. See, e.g., Decision C-754 of 2004 (striking down parts of an important bill reducing pension payouts), available at http://www.corteconstitucional.gov.co/relatoria/2004/c-754-04.htm
Uribe’s signature program on national security. The amendment would have allowed Uribe to enact sweeping anti-guerrilla measures. The Court struck the amendment down on procedural grounds, holding that its passage through the Congress had been improper. It focused on the fact that the President appeared to have interfered in the congressional procedure for passage of the law. The Court noted that the amendment was about to fail a key vote, but the presiding officer in Congress (an Uribe ally), after trying to keep the time for voting open an extraordinary length of time, closed the legislative session on grounds that there was a disturbance on the house floor and refused to certify that a vote had been held. After a one-day delay, the Congress held a new vote without any additional deliberation, and fourteen legislators changed their votes. The obvious inference was that the president intervened in the congressional deliberations and used his control over state patronage to secure the necessary votes. The Court held that these irregularities were improper because they had “distorted the popular will” and violated the principle that the Congress “should be” a “space of public reason.”

At other times the Court has focused on limiting the powerful Colombian presidency more directly. For example, a key line of cases attempts to rein in the unilateral presidential use of emergency powers, requiring that most initiatives be undertaken through the ordinary lawmaking process. In particular, the Court has held that “chronic,” long-term problems may not be dealt with through emergency mechanisms, which instead are limited to truly unforeseen events like earthquakes and other natural disasters. As a result, most important policy problems can no longer be dealt with by the president.

126 See, e.g., Decision C-252 of 2010, § VI.5.a (striking down an attempt to declare a state of Economic, Social, and Ecological emergency to deal with long-running fiscal and administrative issues in the healthcare sector, because “a jurisprudential tradition … has considered the employment of states of exception improper in order to improve chronic or structural problems”), available at http://www.corteconstitucional.gov.co/relatoria/2010/c-252-10.htm.
unilaterally, a striking change from only a few decades early when the country was nearly always under some kind of state of emergency.\footnote{In particular, the country spent 82 percent of the time under some sort of state of emergency or state of siege in the 1970s and 1980s, but only 17.5 percent of the time under such a state between 1991 and 2002. See Uprimny, supra note 112, at 65 tbl.3.}

The Court has also stepped in to mediate the relationship between president and voters. In another key case during President Uribe’s term, the Court struck down a series of referendum questions involving a package of constitutional reforms on the grounds that the questions were misleading and/or packaged in a way that they were likely to deceive voters. For example, the questions included introductory notes that explained a given measure to criminalize drug possession as designed “to protect Colombian society, particularly its infants and young people….”\footnote{See Decision C-551 of 2003, § VI.139, available at http://www.corteconstitucional.gov.co/relatoria/2003/c-551-03.htm. Similarly, a question on pension reform was introduced by asking whether voters would approve “a measure designed to reduce social inequalities and control public spending.” See id. § VI.138.} Further, the Court held that voters could not be allowed to vote on all question as a block because that would turn the referendum into a “plebiscite” on the president rather than a consideration of a diverse set of questions.\footnote{See id. § VI.197-98.} The Court thus struck down parts of the proposed referendum while allowing other pieces to go to the voters.\footnote{Of the 15 questions allowed to go to voters, only one was approved by the requisite number of voters. See Mauricio Hoyos & T. Christian Miller, Uribe Dealt Setbacks in Vote, L.A. TIMES, Oct. 27, 2003, available at http://articles.latimes.com/2003/oct/27/world/fg-colombia27.}

Finally, the Court at times has sought to prop up other control institutions in order to make them more effective in their tasks of checking the executive. In comparative terms, this seems to be a common and important – but overlooked – function of judicial review: courts can improve the position of their allied institutions rather than working directly against institutions that pose a threat to democracy.\footnote{See infra text accompanying notes 144-145 (showing the same strategy in South Africa); Kim Lane Scheppele, How to Evade the Constitution: The Case of the Hungarian Constitutional Court’s Decision on the Judicial Retirement Age, Eutopia Law, Aug. 8, 2012, available at http://eutopialaw.com/2012/08/08/how-to-evade-the-constitution-the-case-of-the-hungarian-constitutional-courts-decision-on-the-judicial-retirement-age/ (describing a Hungarian Constitutional Court decision attempting to defend the independence of the ordinary judiciary).} The Colombian Court, for example, has drafted institutions like the national ombudsman and Attorney General’s office into its large-scale structural cases involving internally displaced persons and ombudsmen, making these institutions both monitors of the executive bureaucracy and sources of information about future policy ideas.\footnote{See, e.g., Decision T-025 of 2004 (requiring that the authorities submit monthly reports to the national Ombudsman and national Attorney General on compliance...}
of measures help to give institutions other than the Court itself leverage over the bureaucracy, arguably increasing accountability.

2. South Africa and the Problem of Dominant Parties

As many commentators have noted, courts working in a dominant party system like the one in South Africa face particular challenges. The African National Congress (ANC), as the party that led the country’s transition out of apartheid, holds a firm grip on political institutions.\footnote{See, e.g., Hermann Giliomee et al., Dominant Party Rule, Opposition Parties and Minorities in South Africa, 8 DEMOCRATIZATION 161 (2001) (describing the South African system as a dominant party system).} It is not a monolithic entity, but it is a powerful force that is in no danger of losing national elections.\footnote{See id. at 172-73 (noting that the ANC is a factionalized party with important intra-party factions).} These dominant-party systems pose special risks to democratization. The absence of political competition may weaken the quality of political institutions, and groups who do not form part of the dominant coalition may find themselves permanently frozen out of power.\footnote{See Hermann Giliomee & Charles Simkins, The Dominant Party Regimes of South Africa, Mexico, Taiwan, & Malaysia: A Comparative Perspective, in THE AWKWARD EMBRACE: ONE-PARTY DOMINATION AND DEMOCRACY 1, 40-41 (Hermann Giliomee & Charles Simkins et al., eds., 1999).}

As various commentators have noted, the South African Court is a constrained actor – the very existence of a dominant party at the center of South African puts strict limits on what the Court can do.\footnote{See Samuel Issacharoff, Constitutional Courts and Democratic Hedging, 99 GEO. L.J. 961, 998-99 (2011) (noting the constraints that the dominant party system in South Africa puts on the constitutional court); Theunis Roux, Principle and Pragmatism on the Constitutional Court of South Africa, 7 INT’L J. CONST. L. 106, 111 (2009) (noting that the Court concentrates on managing its relationship with the dominant ANC and the political branches, rather than seeking to build direct public support).} As Roux has noted, the Court’s jurisprudence for the benefit of the political rights of opposition members stands as an exception to the Court’s broader independence from the dominant ANC.\footnote{See Theunis Roux, The Politics of Principle: The First South African Constitutional Court 1995-2005, at 334-35 (2013) (arguing that because of the presence of the ANC, “the role of constitutional courts in opening up the democratic system to marginalized groups, which is the role that seems most easily justifiable in a mature democracy, is precisely the role that the … Court found hardest to perform.”).} For example, in the New National Party case, the Court declined to strike down registration rules that had the effect of barring many members of opposition parties from voting, because it held that these measures

were incidental to a proper regulatory program rather than being aimed at excluding voters.138

Still, away from core issues of political rights, one does discern some program of the Court to improve the quality of democratic institutions by working on some of the characteristic problems with dominant party systems. At times, the Court has been able to exploit intra-party splits within the ANC, helping to strengthen the voice of groups that might otherwise have been marginalized.139 The famous socioeconomic rights case Treatment Action Campaign might be explicable on these terms: after a faction of the ANC (including the incumbent President) came out against the availability of drugs that had complete effectiveness at preventing the spread of HIV in pregnant women from parent to child, the Court handed down a decision requiring that they be made widely available.140 The decision helped to empower leftist factions within the ANC who had been marginalized by the president and who supported the broader availability of the drugs.141

Second, as in the case of Colombia, the Court has at times taken actions to prop up other institutions that are needed to provide accountability.142 For example, in a pair of recent decisions, the Court imposed limits on the ANC’s ability to assert control over an independent institution, the National Prosecution Authority, charged with investigating cases of political corruption. In one case the Court struck down the president’s attempt to appoint a candidate himself tainted with prior charges, holding that the president had not rationally considered all relevant factors.143 In another case the Court struck down reforms that would have given many of the National Prosecution Authority’s powers to

---

138 See New National Party of South Africa v. Government of the Republic of South Africa and Others, 1999 (3) SA 191 (CC), 1999 (5) BCLR 489 (CC), ¶¶ 10-17. This was one of several early cases where the Court declined opportunities to help open up the political system and make it more competitive. For example, in a second important case the Court upheld a set of constitutional and statutory reforms that amended the constitution to allow national, provincial, and local legislators to change parties during certain periods. (The original legal framework had banned such efforts at “floor-crossing” or “shirt-changing.”). The Court upheld the reforms, which weakened smaller parties once elected by allowing the ANC to use patronage resources and other devices to pry them away from their initial parties. See United Democratic Movement v. President of the Republic of South Africa and Others (No. 1), 2003 (1) SA 488 (CC), 2002 (11) BCLR 1179 (CC), ¶ 121.

139 See Gilomee et al., supra note 133, at 172-73 (noting that some factions within their party use their power to repress other factions).

140 See Minister of Health and Others v. Treatment Action Campaign and Others (No. 2), 2002 (5) SA 721 (CC), 2002 (10) BCLR 1033 (CC), ¶ 135.

141 See Roux, supra note 137, at 298-99.

142 See supra text accompanying note 132.

143 See Democratic Alliance v President of South Africa and Others, 2013 (1) SA 248 (CC), 2012 (12) BCLR 1297 (CC), ¶ 86.
the police.144 As Issacharoff points out, both of these cases were issued without the court directly taking on core constitutional principles or issuing head-on challenges to the incumbents.145 In other words, the Court relied largely on subconstitutional principles to put limits on that party’s power.

C. Working around Democratic Institutions

In contrast to the “insider” strategies of the previous section, where courts seek to improve democratic institutions, is a set of “outsider” strategies where courts work to build up democracy by working around those institutions. This means that courts work directly to build up civil society and to spread constitutional culture. Although these approaches have been largely ignored in the literature, they appear to be commonly used in new democracies.

The core of this strategy is that courts seek to set up alternative forums for democratic deliberation that bypass traditional democratic institutions. This may be an especially appealing strategy in environments with poorly functioning democratic institutions because it requires less direct involvement with those institutions and does not require that courts be as tethered to the slow process of institutional reform. That is, while in Charles Epp’s classic formulation courts are dependent on a “support structure,” including civil society support and a strong constitutional culture, to carry out their goals, the strategies explored in this section flip that narrative, demonstrating how courts can take steps to influence both variables.146 I briefly draw on examples from India and Colombia to illustrate the point.

Both countries have experimented with structural injunctions to build up civil society groups and give these groups leverage over the state. The Colombian Constitutional Court established continuing jurisdiction over cases involving internally displaced persons or internal refugees in 2004, and did the same in a case involving the healthcare system in 2008.147 The internally displaced persons case involved the state’s failure to develop any real public policy to deal with about 3 to 4 million Colombians who had to leave their homes and relocate to different parts of the country because of Colombia’s

144 See Glenister v President of the Republic of South Africa and Others, 2011 (3) SA 347 (CC), 2011 (7) BCLR 651 (CC). The Court focused on the argument that the Constitution must be read in light of international agreements requiring that an “independent” anti-corruption regime be set up within domestic legal orders. See id. ¶ 189.
147 See Decision T-025 of 2004 (internally displaced persons); T-760 of 2008 (healthcare).
ongoing civil violence. The Court declared a “state of unconstitutional conditions” and began issuing detailed follow-up orders to the state on a range of issues as diverse as housing, access to job training, and restitution for lost property. The healthcare case involved the Court’s attempt to fix basic structural problems in a troubled system that is used by nearly the entire population of the country. In particular, the Court held that there were systematic problems involved in the package of benefits received by poorer Colombians and in the way the system was financed.

The key point here is the model used by the Court. First, the Court created civil society commissions charged with monitoring bureaucratic performance and with formulating policy ideas. The commission in the internally displaced persons case is composed of groups representing displaced persons themselves, domestic and international NGOs, and other experts in law, public policy, sociology, and related disciplines. Second, the Court has held regular public hearings, which are generally televised and widely covered by the media. These hearings are attended by members of the civil society commissions, control institutions, members of Congress, and the state officials themselves, and force the members of the state to account for their progress (or lack thereof) in front of the commissions and institutions charged with monitoring them.

Further, the Court has retained jurisdiction and relied on a model of issuing repeated follow-up orders to deal with discrete parts of the two massive structural cases they have taken up. The Court’s orders are based on feedback – in other words on an assessment of the kind of progress that the state had made in achieving the different goals set out by the Court. The civil society commissions and control institutions play a key role in monitoring state compliance and also in suggesting policy ideas and the design of particular orders to the Court. An example is the system of statistical indicators that the Court demanded be set up as a starting point for evaluating the magnitude of the problem of internally displaced persons. The state and the civil society commission each proposed a battery of indicators along a range of issues like the

---

148 For a detailed description of the key follow-up orders, see CESAR RODRIGUEZ GARAVITO & DIANA RODRIGUEZ FRANCO, CORTES Y CAMBIO SOCIAL: COMO LA CORTE CONSTITUCIONAL TRANSFORMO EL DESPLAZAMIENTO FORZADO EN COLOMBIA 82-90 (2010).

151 See id.

152 See id. at 1669 (describing such a hearing in June 2009 on the internally displaced persons case).
access of the displaced to healthcare, food, employment opportunities, etc., and the Court largely adopted the measures of the commission.153

The Indian Court at times has acted in a very similar way. In 2001, for example, the Court declared a structural interdict involving the right to food in India, over which it continues to retain jurisdiction. The Court found that there were sweeping problems with respect to the access of the poor to food in India, and has since issued a series of wide-ranging orders in all Indian states.154 These orders have required, for example, the creation of programs to give grain to poor families, allowing poor workers to act in work-to-food programs, and to give schoolchildren access to lunch during the school day.155 The Court set up a Commission to monitor compliance and to make policy recommendations, although in its case the commission more closely resembles the United States “special master” – the commissioners are a pair of legal experts rather than a confluence of civil society groups.156 Still, the Commission itself consults widely with civil society groups, viewing them as a key source of policy and compliance information. In particular, the Commission has worked very closely with the Right to Food Campaign, a network of civil society groups that helped to launch the litigation.157 The Campaign itself holds regular public hearings throughout the country in an effort to raise awareness about the problem.158

At their best, these cases may achieve two different goals. The first is strengthening civil society in contexts where they have historically been weak. The courts provide an incentive for civil society to organize by giving them a central message to organize around, an institutional structure through which they can influence policy, and a public forum in which to air their grievances. At the same time, they increase the leverage of civil society by forcing the state bureaucracy to pay attention to their policy ideas. The second goal is spreading constitutional culture, again in contexts where it has historically been weak. Courts do this chiefly by publicizing important constitutional issues (through the use of public hearings and similar devices) and by demonstrating that these issues need to be taken seriously.

Civil-society building and the spreading of constitutional culture are also achievable outside of the confines of structural cases. For example, one could consider the broader strategies of the Indian and Colombian courts to radically expand access to constitutional justice. The Indian Supreme Court deliberately undertook a campaign of public interest litigation and as part of that

155 See id. at 700.
156 See id. at 726 (explaining that the commission is staffed by two experts).
157 See id. at 719-26 (explaining how the campaign works to establish grassroots support, publicize the issue, and to pressure different levels of the state bureaucracy).
158 See id. at 724.
campaign made it extremely easy to access the Court. The Court for example relaxed standing rules to allow NGOs and similar groups to sue on behalf of others when issues involved the public interest, and accepted informal petitions – like hand-written letters – as sufficient to start a dispute.

The Colombian Court, similarly, has relaxed standing rules for individual constitutional complaints and allowed recourse to the Court through very informal means. Moreover, the Court has engineered its substantive rules in ways that invite claims. For example, in the first decade of the Court’s existence it shifted away from a position in which only very poor citizens in unusual circumstances could access the Court for socio-economic rights claims and towards a position in which the Court became a workhorse for middle-class claims seeking access to healthcare treatments or larger pensions. Such claims now make up half or more of the Court’s total docket.

These attempts to expand access to the court might again be defended as “outsider” strategies: the allowance of broad standing for groups to represent public-interest issues, for example, might be seen as an attempt to encourage the formation and activism of civil society groups across a range of issues. The broader strategy of courts making themselves a focal point for policy-making on a range of issues could be seen as a long run strategy to increase the importance of constitutional values in everyday life. The Colombian strategy of using constitutional litigation to adjudicate mundane socioeconomic rights issues, for example, has made the Colombian individual complaint perhaps the best-known instrument in the country’s legal system.

---

161 See, e.g., Manuel Jose Cepeda, Judicial Activism in a Violent Context: The Origin, Role, and Impact of the Colombian Constitutional Court, 3 WASH. U. GLOB. STUD. L. REV. 529, 552-54 (2004) (explaining that the Colombian individual complaint, the tutela, may be filed at any time, and by informal means like letters and telephone calls if necessary).
162 See Pablo Rueda, Legal Language and Social Change During Colombia’s Economic Crisis, in CULTURES OF LEGALITY: JUDICIALIZATION AND POLITICAL ACTIVISM IN LATIN AMERICA 25 (Javier A. Couso et al., eds., 2010) (tracing the shift in meaning from the Court’s creation in 1991 to an economic crisis in the late 1990s).
164 See Cesar A. Rodriguez et al., Justice and Society in Colombia, in LEGAL CULTURE IN THE AGE OF GLOBALIZATION: LATIN AMERICAN & LATIN EUROPE 134, 159-62 (Lawrence M. Friedman & Rogelio Perez Perdomo, eds., 2003) (presenting data about the importance and ubiquitous nature of the Colombian individual complaint, called the tutela, in the country’s legal culture).
As with judicial interventions designed to improve the performance of political institutions, some of the interventions catalogued here could be defended through the traditional tools of constitutional theory. But the dynamic perspective is useful in highlighting a more productive set of questions. Critics of the large-scale structural interventions in India and Colombia commonly critique them as the taking on of essentially legislative tasks, or in other words as overstepping proper conceptions of judicial role. The dynamic perspective suggests that the right question to be asking may be a different one: what is the long-run effect of a strategy that seeks to build up alternative sources of democracy outside of elected institutions? Do these efforts tend to strengthen or weaken democratic institutions over time? I take up these questions in more depth in Part III.

III. THE CHALLENGES OF A DYNAMIC THEORY

The evidence presented in the previous two sections suggests that there is something fundamentally forward-looking or dynamic in both theories of judicial role and constitutional design in new democracies, and moreover that at least some of this effort is aimed at improving political institutions. This section uses that evidence to suggest two important weaknesses of a dynamic theory: (1) it might be implausible because it requires judges to act against the core interests of their own party systems; or (2) it might have a net negative impact on democracy, either by undervaluing the democracy of the present or by warping the path of democratic development for the future. I conclude that both objections are serious but non-fatal challenges for a dynamic conception of judicial role. More importantly, both points have important implications for the strategies that judges should utilize under a dynamic approach.

A. The Plausibility of a Dynamic Theory

The South African example suggests a first challenge for a dynamic theory of judicial role that focuses on courts improving political institutions: it may be implausible because it requires courts to take actions that go against the core political interests of their own regimes. All normative theories of role are, of course, subject to pragmatic constraints, but a normative theory is of little use if it is nearly impossible for judges to carry out.

Yet in dominant party systems, particular strategies may indeed be very difficult for courts to pull off precisely because of the constraints imposed by the dominant party. The South African Constitutional Court has been particularly timid when confronted with cases involving the political rights of opposition parties and actors. Roux’s comprehensive history of the first South African

165 See, e.g., David Landau, Political Institutions and Judicial Role in Comparative Constitutional Law, 51 Harv. L. Rev. 319, 357-58 (giving some of the critiques of the Colombian Court’s structural jurisprudence).

166 See supra text accompanying notes 137-138.
A DYNAMIC THEORY OF JUDICIAL ROLE

Constitutional Court views this dimension as the Court’s biggest disappointment.\(^{167}\) While the Court has a relatively high amount of freedom to enforce rights in cases involving the death penalty or socioeconomic rights, it is very constrained when trying to directly open up the political regime because those cases involve core interests of the ANC. A Court overly aggressive on those questions would risk retaliation. More broadly, there is some comparative evidence that a court operating in most political systems with strong parties will often have difficulty working against the core interests of those parties.\(^{168}\) This is both because the justices themselves are typically products of those parties and because attempts to work against the core interests of strong parties are

\(^{168}\) Mexico offers a stark example. The Supreme Court of Mexico historically served as a subservient body within what was essentially a one-party dictatorship led by the PRI party, but as the country democratized in the 1990s, the Court was reformed to act as an arbitrator within an emerging three party system. The newly empowered opposition parties sought institutions that would ensure electoral fairness and guard the separation of powers within a (long-dormant) federal system. See, e.g., Jodi Finkel, Judicial Reform as Political Insurance 89-110 (2008). The Court was designed for those purposes: the reforms to the Court created a new mechanism allowing for minorities in national and state-level legislatures, as well as political parties, to challenge the constitutionality of laws and greatly strengthened an existing mechanism allowing the Court to determine conflicts between different branches or level of governments. The resulting Supreme Court has in many ways been an agent of the interests of these parties. It has for example issued important decisions to strengthen federalism and the separation of powers, while doing relatively little to enforce the rights provisions of the Constitution. See Miguel Schor, An Essay on the Emergence of Constitutional Courts: The Cases of Mexico and Colombia, 16 IND. J. GLOB. L. STUDS. 173, 177-83 (2009). Further, it has at times acted against those left out of the party framework. In a 2005 decision, for example, the Court denied an independent candidate even the standing to challenge a law restricting him from running for political office. Ironically, it held that such standing was limited to political parties. See Suprema Corte de Justicia, Amparo en Revision 743/2005, available at http://www.poderjudicialags.gob.mx/Conferencias%20Transparencia/pdfs%5CMATERIAL%20DE%20CONFERENCIAS%20SOBRE%20TRANSAPRENCIA%20IMPARTIDAS%20POR%20LA%20SCJN%5CEJECUTORIAS%5C743-2005%20AR%20PL%20VP.doc. The laws prohibiting independent candidates were not changed until well after a 2008 decision of the Inter-American Court of Justice brought by the loser, which condemned Mexico’s standing laws as a violation of the Inter-American Convention on Human Rights. See Castaneda Gutman v. Mexico, Inter-American Court of Human Rights, Aug, 8, 2008 (holding that the existing legal framework violated the article 25 right to judicial protection), available at http://www.corteidh.or.cr/docs/casos/articulos/serie_c_184_ing.pdf.

38
particularly likely to provoke retaliation against a court. The legal status of third parties within United States constitutional and electoral law might be a case in point. In systems with strong parties, in other words, we would expect the judiciary in some sense to act as an agent for the parties, and that may make them rather unlikely to act in a counter-system manner.

A related but subtler problem may arise in systems where political parties are very weak (see Colombia), or otherwise held in low regard (see India). Here the problem is that courts have incentives to gain political capital by attacking political institutions, rather than by building them up. Where political institutions are weak or perceived as corrupt, justices can gain political support by adopting a discourse and perhaps a jurisprudence that treats them with contempt. The Colombian Court, for example, intervenes aggressively in legislative procedure because it lacks respect for the Congress, and sometimes replaces the political branches in making public policy for the same reason. In one interesting example, the Court stepped in to fix a housing crisis by making a series of policy decisions; the justice who authored the key decisions defended them by quoting a historical populist politician who had stated that “the people are much more intelligent … than their leaders.” As explained in more detail in Section III.C below, the long-run effects of these sorts of interventions on the quality of political institutions are unclear. But there is reason to suspect that some of these actions will have negative rather than positive dynamic effects on political institutions.

The broad point here is that courts are products of their political regimes. This often makes them more likely to act in a pro-system rather than counter-system manner: in the worst case they may actually tend to exacerbate defects in their political systems rather than helping to correct them. This ought to temper our optimism for a dynamic theory of judicial role, but it is not a damning critique of the theory. For example, studies of American constitutional history have convincingly shown that the United States Supreme Court normally acts as a majoritarian rather than counter-majoritarian institution, or at least rarely strays

169 Many scholars have pointed out that courts in the United States tend to support the entrenched two-party system rather than favoring outsiders or upstarts. See, e.g., Samuel Issacharoff & Richard H. Pildes, Politics as Markets: Partisan Lockup of the Democratic Process, 50 STAN. L. REV. 643 (1998) (arguing that courts often uphold regulations that are in fact designed to entrench two-party dominance).
170 See supra text accompanying notes 70-72.
171 See supra text accompanying notes 119-124 (giving examples of relevant caselaw).
172 The case involved a series of Constitutional Court decisions during a housing crisis that threatened several hundred thousand debtors with foreclosure, and in which the Court perceived that the political branches were not taking action. For a fuller accounting of these cases, see David Landau, The Reality of Social Rights Enforcement, 53 HARV. INT’L L.J. 401, 429-31 (2012).
from the political mainstream for long. This fact acts as a dose of realism for a number of theories – like political-process theory – that rely on courts taking unpopular decisions. But it does not fatally undermine those theories, because the Supreme Court has often been able to take a number of different decisions while still staying within the political mainstream.

The same point might be made in comparative terms: the shape of a party system places restrictions on a court operating within that system and thus should make our claims about judicial role more modest in scope, but this fact does not mean that courts are powerless in correcting the defects found within their political regimes. Even in dominant-party systems, courts can take a range of actions without outrunning their “zone of tolerance.” And in other political systems, particularly non-institutionalized party systems, courts have more freedom of action. These party systems may shape the incentives of courts by giving them a strategy of gaining popularity by undermining the party system, but they do not really limit their freedom of action.

The constraints party systems place on judicial power may however be useful in thinking through ways in which courts might be most effective in their task. In particular, they may suggest the superiority of “outsider” strategies over “insider” strategies. The South African case again offers an interesting example. The South African Constitutional Court is highly restricted in the extent to which it can directly increase the power of opposition parties and figures, because cases involving those actors raise core interests of the ANC. Other insider strategies, like propping up the independence of control institutions or using sub-constitutional decisions to aid opposition actors under the radar, may be less constrained. But the South African Court has focused less on outsider

---

174 See Dorf, supra note 173, at 290 (noting the ways in which Friedman’s majoritarian image of the Supreme Court erodes the evidence for Ely’s process-based theory).

176 See supra text accompanying notes 144-145.
strategies, where it may face fewer constraints. The Court is not well-known or particularly popular with the public, and has often not made much effort to engage civil society. This suggests an untapped potential strategy choice, a point I return to below in Part IV.A.

In non-institutionalized party systems, outsider strategies may be better than insider strategies for a different reason: the strategy of “building up” a weak party system may be largely impossible for a court to carry out. The various efforts of the Colombian Constitutional Court and other institutions to cleanse the Colombian Congress or to make it a more deliberative body all suggest that there are limits on a court’s ability to organize a disorganized party system. In those circumstances as well, it may be that outsider strategies have more of a chance to work effectively. But the broadest point is that we still know very little about the empirical effects of different strategies through time – this is an area where more empirical research is badly needed.

B. Undervaluing Democracy or Warping Democratic Development

The dynamic theories that have been developed in comparative constitutional law and practice are necessarily based on a vision that existing political institutions are fundamentally flawed. These flaws are the justification for a dynamic theory of judicial role, and may allow for extraordinary interventions in the current democracy in the name of constructing a better one. But this conception of the theory raises two significant challenges in its relationship to democracy: First, dynamic theories of judicial role appear to be in constant danger of undervaluing the admittedly flawed democracies of the present. Second, judicial interventions may hinder rather than aid improvement in democratic institutions through time. Both of these possibilities also highlight the sheer vagueness of a dynamic approach in guiding judicial action: it is very difficult for a judge to know whether a given strategy is justified or not under the theory.

First, judicial actors in newer or more fragile democracies and their defenders sometimes act as though their political systems operate on wholly different logics than those in consolidated democracies. But this claim is obviously untrue – all political systems have at least pockets with serious problems of representation, accountability, and capacity. Take the assumption that a Congress or parliament be “well-functioning.” Many legislatures around the world might be argued to fail this test, the United States Congress included. The decline in the salience of party systems in most countries has

---

177 See supra text accompanying notes 70-72.
178 See supra text accompanying note 15 (making clear that the assumption is a key one in standard constitutional theory).
179 See, e.g., Michael J. Teter, Gridlock, Legislative Supremacy, and the Problem of Arbitrary Inaction, 88 N.D. L. Rev. 2217, 2217 (2013) (“My central thesis…is this: congressional gridlock threatens our constitutional structure, both as originally constructed in 1789 and as it currently stands.”).
A DYNAMIC THEORY OF JUDICIAL ROLE

been well-documented.\footnote{See, e.g., Harold D. Clarke & Marianne C. Stewart, The Decline of Parties in the Minds of Citizens, 1 ANN. REV. OF POL. SCI. 357 (1998) (summarizing the decline in rates of party affiliation across the United States, Canada, the U.K., and a range of other advanced democracies).} Put in this context, dynamic theories of judicial review may prove far too much – they might justify extraordinary interventions across both developing and developed democracies. Indeed, as a descriptive matter the disenchantment with electoral politics is part of the explanation for the increasing judicialization of politics around the world.\footnote{See, e.g., Elena Martinez Barahona, Judges as Invited Actors in the Political Arena: The Cases of Costa Rica and Guatemala, 3 MEXICAN L. REV. 3 (2010) (arguing that empowerment of courts in two Central American countries is largely explained by the distrust of citizens towards their own political systems).}

The possibility of undervaluing the democratic present is again an important critique of the theory but not a damning one. There are differences – in degree if not in kind – between different types of democracy. The finding that some systems are particularly prone to democratic failure is real: newer democracies face risks of erosion that are more serious than those found in more-developed democracies.\footnote{See supra text accompanying note 27 (explaining the rise of hybrid regimes).} The problems of representativeness and accountability posed by non-institutionalized or dominant-party systems are again real: both systems produce pathologies that are consistent across different countries and predictable in their results.\footnote{See supra text accompanying notes 42-60.} Pervasive problems of corruption afflict many countries in the developing world; whereas corruption is generally a much less serious problem in developed democracies.\footnote{See, e.g., Transparency International, Corruption Perceptions Index, at http://cpi.transparency.org/cpi2013/results/ (showing that perceived levels of corruption are generally relatively low in Western Europe and the rest of the developed world, and higher across the rest of the world).} In short, there are meaningful differences that justify a different approach in many new democracies.\footnote{ Courts do have some ability to distinguish well-functioning and poorly-functioning enclaves within their political systems, which could be a useful tool for a court seeking to avoid excessive interference with democracy. The Colombian Constitutional Court, for example, sometimes seems to build a differential assessment of the quality of legislative deliberation into its jurisprudence. The Court is often faced with questions of whether a given cutback to an existing pension scheme or other social benefit is justifiable. \textit{Compare} Decision C-1064 of 2001 (upholding austerity cuts to the real value of the salaries of higher-income public workers, because the Congress and the executive had justified the need for cuts in order to preserve social spending for the poor, and the plan had prioritized lower-income workers by keeping their salaries constant), with C-776 of 2003 (striking down a decision to expand the VAT-tax base by taxing goods of primary necessity, because the decision had substantial impacts on the poor and appeared to be an “indiscriminate” decision that was made without broad legislative deliberation).}
The more serious challenge to a theory that relies on the dynamic effects of judicial action is the disquieting possibility that judicial interventions aimed at improving democracy through time may actually have negative dynamic effects. In other words, it is possible that institutional designs and judicial decisions designed to improve and normalize democratic performance may have the opposite impact. The problem is perhaps easiest to see with institutions designed to protect against democratic erosion. Some commentators, for example, recommend institutionalizing a role for the military as a hedge against democratic erosion.\textsuperscript{186} The theory is that military actors, if inculcated with the proper set of values, can protect democracy with resources that courts do not have.\textsuperscript{187} Anti-democratic parties or actors may be able to ignore or pack courts, but they will have more difficulty neutralizing military actors.\textsuperscript{188} Others recommend giving courts a predominant role, by allowing them to ban anti-democratic parties or strike down problematic constitutional amendments.\textsuperscript{189} Turkish democracy, for example, historically combined elements of all three pieces of this model. The Turkish military was seen as a guardian of the secular democratic order and stepped in several times to protect against the threat of chaos or the threat posed by Islamist parties.\textsuperscript{190} The Turkish Constitutional Court acted aggressively to ban parties and to strike down constitutional amendments that were seen as violating core principles of the constitution.\textsuperscript{191}

The model views these elements as temporary devices to help buy time as the democracy matures. But it is fairly obvious that each of them also poses risks to democratic development, although in different ways and perhaps in different magnitudes. At worst case, an actor designed to protect democracy might play a directly anti-democratic role: the military could overthrow or intervene in a democratic order in order to establish a military dictatorship or for a number of other bad reasons.\textsuperscript{192} More subtly, the existence of all of these

L. 175 (2012) (exploring the Court’s use of the unconstitutional constitutional amendment power); Patrick Macklem, Militant Democracy, Legal Pluralism, and the Paradox of Self-Determination, 4 INT’L J. CONST. L. 488 (2006) (considering the Turkish Constitutional Court’s use of its party-banning power).
\textsuperscript{192} There is a long history of this kind of anti-democratic intervention in many regions of the world, including Latin America. See, e.g., Miguel Schor, Constitutionalism Through the Looking Glass of Latin America, 41 TEX. INT’L L.J.
A DYNAMIC THEORY OF JUDICIAL ROLE

crutches might have a negative rather than positive impact on the way that
democratic institutions evolve. For example, it may be that if dangerous but
seductive political movements are banned from the political sphere rather
than being allowed to compete, the remaining parties may not work as hard at
developing popular appeal, and thus may be unprepared to compete if they
somebody have to stand for election against the full spectrum of political
competition. Similarly, the doctrine of unconstitutional constitutional
amendments may have a negative impact on legislative behavior: Legislators,
knowing that the court will protect the system from deeply anti-democratic
constitutional amendments, will have fewer incentives to develop internal
safeguards regarding the use of the amendment process.193

The evidence from Turkey, although ambiguous, may support the idea
that these kinds of institutions can weaken democratic development through
time. While the Constitutional Court banned the large Islamic movement that
would become the ruling party several times, it continued to win votes through
successive elections and eventually was allowed to take office.194 The party
platform moderated somewhat with each new incarnation, but the actors and
basic goals remained the same.195 Once it took office, it neutralized the
extraordinary powers previously exercised by both the Court and the military.
The Constitutional Court was packed by members of the majority party, and the
military had its political role largely removed.196 The result is that Turkey has
become a dominant-party regime, and perhaps is undergoing a process of

1, 21 (2006) (pointing out the role that Latin American militaries have played in
maintaining “internal order” rather than external peace).
193 See MARK TUSHNET, TAKING THE CONSTITUTION AWAY FROM THE COURTS 57-58
(1999) (referring to this problem as “judicial overhang”).
194 See Samuel Issacharoff, Fragile Democracies, 120 HARV. L. REV. 1405, 1442-46
(2007) (tracing the history of attempts to ban the movement that would become the
Justice and Development party).
195 See id. at 1446 (arguing that the political movements moderated through time
because “prospect of reintegration into Turkish politics remained present subject to a
tempering of the perceived threats to continued democratic order”).
196 On the Constitutional Court, see, for example, Ozan Varol, The Origins and
Limits of Originalism: A Comparative Study, 44 VAND. J. TRANSNAT’L L. 1239,
1295-96 (explaining the context in which the Court was packed in 2010, by
increasing the number of justices from 11 to 17 and by giving the ruling party the
power to make those appointments). The story with respect to the military is more
complex: the ruling Justice and Development party has certainly taken away many of
the powers the military, but scholars have argued that Europeanization and ties with
the EU were a driving force in leading the military to accept the reduction of its
powers. See Zeki Sarigil, Europeanization as Institutional Change: The Case of the
Turkish Military, 12 MEDITERRANEAN POL. 39, 50 (2007) (arguing that the military
was “rhetorically entrapped” by its stated commitment to westernization).
democratic erosion. The old secular parties, meanwhile, have not fared well within the new system.

Teasing out causation is quite difficult. One might say that the extraordinary institutions – the political role of the military and the exceptional powers of the Constitutional Court – were necessarily temporary, and their defanging was part of the process of normalizing the democracy. As noted above, a theory that allows for a permanent hemming in or replacement of democracy, or that maintains it in a permanent state of abnormality, seems deeply problematic. The only problem may have been the timing: the safeguard institutions were not in place long enough to have the intended effect. On the other hand, there does seem to be some evidence that the secular parties did not develop the political competitiveness or popularity needed to compete on an open playing field. This may have been inevitable, or it may have been a result of the hemming in of democratic institutions.

The Turkish case is an unusual one because the safeguards that were used in that regime placed extraordinary restrictions on democracy. But a similar argument might be made about other judicial efforts to build up democratic institutions. Take, for example, judicial efforts to work around political institutions by building up alternative spaces for democratic development. As already noted, for example, the Indian and Colombian Constitutional Courts have issued structural remedies involving food, healthcare, and other constitutional goods that seemed designed to make themselves the center of policymaking. The dynamic effects of this strategy are unclear. It may be that they start a virtuous circle: a court’s efforts to strengthen civil society and increase the salience of constitutional culture may spark new pressures that over time improve the quality of democratic institutions. On the other hand, such powerful judicial action may in fact sap energy from political institutions. As civil society groups and citizens come to view the court and not the political institutions as their best shot at getting responses from government institutions, they may focus on the court rather than on legislatures and executives, thus hindering the development of those institutions. Aggressive judicial assertions of power – even ones designed to improve the quality of democratic politics – may have negative effects on the development of other political institutions.

The possibility again serves as an important critique and corrective on a dynamic theory of judicial review. It counsels for modesty in judicial exercises of power, because we know very little about the dynamic effects of aggressive exercises of judicial review in newer democracies. It is hard to say whether

198 See id. at 47 tbl. 1.
199 See supra Part I.C.
200 See supra Part II.C.
201 See TUSHNET, supra note 193, at 57-58.
strong courts support or undermine democratic development. Second, it argues for more scholarly work in figuring out which kinds of tools are particularly likely to have negative effects on democratic development. Third, it highlights the uncertainty embedded in a dynamic theory of judicial review, because it suggests that courts and other actors may have a very difficult time figuring out whether a given strategy is justified. Finally, a consideration of the negative effects that exercises of judicial power may have on democratic development might again be helpful in trying to design improved judicial strategies. This may in part be about coming up with less damaging alternatives to existing practices. As Issacharoff suggests, it may be less harmful to ban particular manifestations of speech within elections than to ban supposedly anti-competitive parties altogether, and it may be better to prohibit parties from competing in elections rather than banning them altogether.

With more complex approaches like structural injunctions, there may be ways to build up civil society without having the court run the risk of replacing the political branches as the center of policymaking. The concept of democratic experimentalism or destabilization rights might be useful here – courts can try to help organize civil society groups, and to give those groups leverage over state officials, without themselves becoming the focal point for making policy decisions. This may help to ensure that courts reap the dynamic benefits of

202 We may be able to construct such a theory with respect to democracy-preserving institutions. It is clear that granting the military a role in a constitutional democracy is a risky strategy – such a strategy would only be sensible as a “second best” where there were other forces leading to a substantial risk of democratic failure. See, e.g., Virginie Collombier, The Military and the Constitution: The Cases of Algeria, Pakistan, and Turkey (June 2012) (noting that military intervention raises a significant risk of fail across all of the countries at issue), available at
http://www.arab-reform.net/sites/default/files/Const_Military_and_the_Constitution_V.Collombier_May12_Final_En.pdf. Judicial party-banning and the militant democracy model raise an intermediate level of risk; a court probably poses less of a danger to democratic development than the military, but eliminating political forces – especially major forces – from the political playing field may have significant effects on democratic development. Relative to the other two models, the unconstitutional constitutional amendments doctrine seems to pose relatively modest risks to democratic development. An overly-aggressive use of the doctrine may have some effect on the behavior of political institutions – a point I return to below – but these effects are probably smaller than the effects of either institutionalizing a role for the military or prohibiting some political movements from competing.

203 See Issacharoff, supra note 194, at 1421 (developing a typology of prohibition and limitations on anti-democratic political forces, and noting how alternative devices have been used in places like India and Israel).

204 For the foundational work on democratic experimentalism and judicial review, see Charles F. Sabel & William H. Simon, Destabilization Rights: How Public Law Litigation Succeeds, 117 HARV. L. REV. 1015 (2004). Sabel and Simon argue that modern public law litigation works by providing a set of “destabilization rights,”
judicial activism without paying the high costs of stunting democratic institutions. Courts, in other words, might focus on ensuring that civil society groups have a voice with policymakers (through devices such as public hearings) and monitoring the development of negotiated solutions, rather than with direct exercises of setting policy. The point of this section, at any rate, is not to design particular remedial strategies but to suggest that the problem of judicial activism warping democratic development is a real one that should shape strategy choices by judges. The next part takes these considerations further, by showing how a dynamic perspective is practically helpful in providing perspective on some of the most difficult contemporary problems in the field of comparative constitutional law.

IV. THE THEORY APPLIED: TWO DIFFICULT PROBLEMS IN COMPARATIVE CONSTITUTIONAL LAW

One test of a theory is whether it is useful “in action” to shed light on live debates: this section demonstrates that a dynamic perspective can provide that perspective. In particular, I apply the theory to two of the most important and unsettled questions in the field of comparative constitutional law: the debate about the forms of review or the intensity with which courts seek to review political action, and the debate about the appropriateness of a substantive doctrine of unconstitutional constitutional amendments. In both cases, I show that the approach is useful in helping to frame the questions that judges should be asking.

A. The Debate between Weak-Form and Strong-Form Review

Some of the most important recent work in the field has focused on the proper means for judges to exercise judicial review, particularly for newer rights like socio-economic rights. The centerpiece of this literature is the famous South African case Grootboom, which a large group of commentators has lauded as inventing a new form of review and as representing a “canonical” case within the field. In Grootboom, the South African Constitutional Court considered a

which they define as “claims to unsettle and open up public institutions that have chronically failed to meet their obligations and that are substantially insulated from the normal processes of political accountability.” See id. at 1020. They contrast their model from traditional command-and-control litigation, where courts come up with detailed decrees envisioning all aspects of the policy ex ante and closely monitor compliance with the defendant’s compliance with the prescriptions found in that decree. See id. at 1021.

205 For more detail on this model of judicial involvement, see infra Part IV.A.
challenge to South African housing policy by an impoverished woman who had been evicted from her existing housing and who had no other access. She claimed that South Africa’s housing policies, and particularly its failure to provide short-term solutions for people like her who were in desperate need, violated the constitutional right to housing. The South African Constitutional Court agreed with the plaintiff, but refused to issue either an individualized remedy or a structural remedy covering all plaintiffs in her situation. Instead, the Court merely issued a declaration that the state was not fulfilling the constitutional rights at issue because it had no plan for people with the gravest short-term needs, and asked the Parliament and other authorities to fix that deficiency.

This approach to rights-enforcement has been dubbed “weak-form” enforcement. Weak-form enforcement is a model of review where the court points out violations of rights to the political branches and to the citizenry, but then steps back rather than seeking to make policy on the right at issue. As Tushnet says, legislative actors can then “address – or deliberately refuse to address – the difficulties that courts have identified.” This is contrasted to standard “strong-form” review, where the Court itself makes the relevant policy determination.

Scholars including Tushnet and Cass Sunstein have praised the Grootboom decision, and more broadly weak-form review, as properly reconciling the enforcement of rights – particularly socioeconomic rights – with democracy. They point out that socioeconomic rights like the right to food,
housing, and healthcare raise special concerns of democratic legitimacy and
capacity because they may require that judges rework state priorities and make
decisions involving large amounts of budgetary resources. Tushnet quotes Frank
Cross’s well-known argument against judicial enforcement of social rights in the
United States because such enforcement either raises the specter of “judges
running everything” or the much more likely view that courts will do nothing
with those rights because they view them as too politically-costly to enforce.213
While many non-socioeconomic rights cost money (take the right to a fair trial),
there are real differences in degree, if not in kind, between so-called first
generation rights and socioeconomic rights.214
Supporters of weak-form review thus view it as a way to reconcile
especially troublesome kinds of rights with democracy. Courts can act to
vindicate the right while making especially careful to avoid invading the proper
space of political actors. In other words, these scholars see weak-form review as
the solution to judicial overreaching within a standard, static conception of
democratic theory. Giving this theoretical construct, Tushnet suggests in recent
work that weak-form review is “the only decent institutional design” for the
enforcement of socio-economic rights, and perhaps for the enforcement of a
much broader set of rights as well.215
While the Grootboom decision has largely been celebrated by foreign
constitutional theorists who view it as the solution to their own difficult
problems of constitutional theory, it has received a very different reception in
South Africa, where it is often viewed as a failure.216 The case against
Grootboom is that the Court’s remedy – an exhortation to the political branches
to take unspecified forms of action – was too weak to achieve anything.217

213 See Frank B. Cross, The Error of Positive Rights, 48 UCLA L. REV. 857, 887
(2001) (“[B]oth the critics and the proponents often misconceive the likely
consequences of positive rights recognition, namely that positive rights would not be
aggressively enforced.”).
214 See TUSHNET, supra note 206, at 234 (noting that first-generation rights like the
right to free speech imply costs but arguing that “the size of budgetary consequences
matters”).
215 See Tushnet, supra note 211, at 2259.
216 See, e.g., Rosalind Dixon, Creating Dialogue About Socioeconomic Rights:
Strong v. Weak-Form Judicial Review Revisited, 5 INT’L J. CONST. L. 391, 391
(2007) (noting that South African constitutional scholars “now agree generally that
the Court’s intervention was — to an important degree — too limited or ‘weak’”);
David Bilchitz, Giving Socioeconomic Rights Teeth: The Minimum Core and its
“undesirable effect” on enforcement of the social right at issue).
217 See, e.g., Dennis Davis, Socio-economic Rights in South Africa: The Record of
the Constitutional Court After Ten Years, 5 ESR REV. 3, 5 (arguing that, in response
Similarly, the “model” of review invented by *Grootboom* has not spread to the rest of the developing world. Others courts active in enforcing socioeconomic rights in Latin America and Asia have relied on a different set of approaches, including giving individual plaintiffs specific individual remedies and using structural injunctions.218

Within South Africa itself, however, *Grootboom* has important progeny: a series of follow-up cases also on the right to housing, and in which the South African Constitutional Court has tried to make weak-form review more effective. Most of these cases involved poor citizens at risk of being evicted from their homes, and without any other place to live.219 The Court began issuing what it called “engagement” remedies, where it required officials to negotiate with private actors or with their civil society representatives before carrying out the eviction.220 This allowed the Court to resolve the case without getting into a deep discussion of the underlying constitutional law issues, and without directly making policy. Sometimes, these engagements resulted in successful outcomes and serious discussions; often, they did not.221

In recent cases, the Court has tried to put more teeth into the engagement remedy by requiring that the state follow particular procedures in the course of the engagement. For example, the Court has required that the state consider certain issues – say the presence of adequate alternative housing – before carrying out an eviction.222 Further, in recent decisions, the Court has shown a tendency to avoid constitutional issues if it can: it has treated arguably to *Grootboom*, “there has been little visible change in housing policy to cater for people who find themselves in desperate and crises situations”).

219 For a comprehensive overview of post-*Grootboom* housing jurisprudence up to the present, see Brian Ray, *Evictions, Avoidance, and the Aspirational Impulse*, 5 CONST. COURT REV. ___ (forthcoming 2014).

220 See, e.g., *Occupiers of 51 Olivia Road v. City of Johannesburg*, 2008 (3) SA 208 (CC), 2008 (5) BCLR 475, ¶ 9-11 (describing the process of engagement ordered by the Court in a prior decision).

222 See *Occupiers of Portion R25 of the Farm Mooiplaats 355 JR v. Golden Thread Ltd and Others*, 2012 (2) SA 337 (CC), 2012 (4) BCLR 372 (CC), ¶ 21 (issuing an order requiring a detailed report from the local government covering, *inter alia*, (1) “the particulars of the housing situation of the applicants,” (2) steps it has taken on “alternative land or housing,” (3) when that alternative land or housing will be provided, (4) the effects of an eviction if undertaken without alternative accommodation, and (5) whether and how the city can take steps to “alleviate” the harms to the property owner if they eviction cannot be carried out).
constitutional issues as statutory ones. In particular, it has shoe-horned many of the recent housing cases into the Prevention of Illegal Eviction from and Unlawful Occupation of Land Act, even if there was some question as to whether that framework should have applied.223

One way to look at the recent decisions is that the Court is slowly moving along a spectrum of weak-form and strong-form enforcement, closer to the strong-form pole.224 In other words, that it is trying to give its initial efforts at weak-form review in cases like Grootboom more teeth and a higher probability of actually producing results within individual cases. In a careful way, the Court is seeking to trade off some degree of deference to the political branches for increasing effectiveness.

A dynamic theory of judicial review suggests a different point: the debate about weak-form review is itself flawed because it misses key dimensions of judicial role in new democracies. From a dynamic perspective, the South African Constitutional Court’s series of efforts to intervene in the housing sector should be judged at least partially by whether they helped to “catalyze” civil society movements and to increase the leverage of those movements over state officials, as well as by whether they extended the importance of constitutional culture within the country.225 The line of cases could be viewed as a type of “outsider” strategy, noted above, where courts seek to work around political institutions and to instead build up alternative spaces for democratization. This should be an attractive strategy in South Africa, because the main alternative – a strategy that seeks to temper the excesses of a dominant party-system directly – is largely closed off.226 As Roux has noted, the Court has had more space in socioeconomic rights cases, largely because it faces sympathetic factions within the dominant party itself.227

A dynamic perspective thus suggests a different set of tools for critiquing the work of the South African Constitutional Court. On the positive side, its engagement orders are directly aimed at giving civil society groups a voice. They force local officials to speak with groups that would otherwise be

---

223 See, e.g., Maphango v. Aengus Lifestyle Properties, 2012 (3) SA 531 (CC); 2012 (5) BCLR 449 (CC), ¶ 48 (deciding to use the statute even though neither party had relied heavily upon it in their submissions, because of “rule of law considerations”); see also Frank Michelman, Expropriation, Eviction, and the Gravity of the Common Law, 24 STELENBOSCH L. REV. 245 (2013) (explaining cases like Maphango as a device of “inter-branch comity”).

224 See Ray, supra note 219 (arguing that the Court can use various devices to ratchet up the impact of its jurisprudence on housing issues).

225 See KATHARINE G. YOUNG, CONSTITUTING ECONOMIC AND SOCIAL RIGHTS 172-73 (2012) (arguing that courts enforcing socioeconomic rights should aim to “catalyze” change by other institutional actors).

226 See supra Part II.B.2 (noting the struggles of the South African Constitutional Court in seeking to ameliorate the effects of the country’s dominant-party system).

marginalized and that would otherwise have little ability to combat their evictions. The Court’s use of enhanced procedural techniques is particularly interesting in this regard: by laying out the kinds of topics that need to be addressed before any eviction may occur, and by regulating the sorts of processes through which the discussion must proceed, the Court has done some work in making sure that political actors do not simply ignore the existence of civil society.\textsuperscript{228}

But key features of the remedial design would also seem to limit the extent to which these decisions serve to increase the organization and power of civil society groups, or to extend the reach of constitutional culture. The Constitutional Court has tended to treat the engagement actions as a set of independent, atomized discussions between an individual set of local officials and an individual set of evictees. There is no institutional structure linking together the separate cases. And the Court’s focus has been on resolving individual cases rather than on articulating a broader set of norms or values.\textsuperscript{229} The Court’s engagement orders generally focus on the individual cases, rather than on making broader policy changes to the housing sphere.\textsuperscript{230} They seem calculated to have little symbolic value, because they generally avoid constitutional issues if possible and focus instead on the details of statutes.\textsuperscript{231} This may rob the Court’s decisions of the symbolic force needed to help create or hold together a movement.\textsuperscript{232} And it may prevent the Court’s decisions from

\begin{flushright}
\textsuperscript{228} See \textit{supra} note 222 (describing the detailed engagement order at issue in the \textit{Golden Thread} case).
\textsuperscript{229} See Ray, \textit{supra} note 219, at 11 (finding that the Court often “provid[es] concrete relief to the individual plaintiffs without tying that relief to any broader constitutional requirement”).
\textsuperscript{230} See, e.g., \textit{Golden Thread} at ¶ 21 (issuing a detailed set of requirements for reporting within the confines of the individual plaintiffs at issue, but requiring no information beyond the confines of the specific case).
\textsuperscript{231} See \textit{supra} text accompanying note 229 (elaborating on the Court’s propensity for avoiding constitutional issues in favor of statutory issues).
\textsuperscript{232} The Court has sometimes showed more of a propensity to build up the power of civil society. In probably the Court’s most effective socioeconomic intervention, for example, the \textit{Treatment Action Campaign} case, the Court relied on a relatively developed set of civil society actors to bring it a case challenging the government’s refusal to expand a network of highly effective drugs preventing transmission of HIV from mother to child, despite an absence of cost considerations (the drugs were being provided for free). See, e.g., William Forbath, \textit{Cultural Transformation, Deep Institutional Reform, and ESR Practice: South Africa’s Treatment Action Campaign, in STONES OF HOPE: HOW AFRICAN ACTIVISTS RECLAIM HUMAN RIGHTS TO CHALLENGE GLOBAL POVERTY} 51, 51-52 (2011). Even though the court did not issue a structural remedy or otherwise maintain supervision over the case, it did catalyze the Treatment Action Campaign by giving it a clear victory over the state. See \textit{Young}, supra note 225, at 262 (describing the Treatment Action Campaign’s more recent attempts to pressure the state). In contrast to the eviction cases
having the kind of broader impact needed to construct and maintain a constitutional culture built around socio-economic rights.

At least some of these weaknesses could be remedied without the Court’s approach necessarily collapsing into strong-form review, where the Court directly makes the policy decision at issue. The Court could work at institutionalizing a long-term role for civil society linked across different cases, perhaps by creating a Commission composed of a mix of groups of displaced persons themselves with both national and international NGOs. The Court could also do more to publicize the cases over which it has taken jurisdiction, perhaps by holding televised or media-saturated hearings at which it dealt with the issues raised in the eviction petitions. The Court could do more to develop the substantive constitutional principles enveloped in the right to housing that it applies through its case law. Finally, it could broaden the scope of engagement by giving civil society groups a voice not only in the individual eviction at issue, but also in the broader construction of housing policy. None of these shifts would force the judiciary to give itself the “last word” in setting housing policy. But they probably would help to ensure a more robust civil society in the housing sphere.

The weak-form review debate has been constructed to answer a particular problem stemming from mature democracies: how can rights enforcement best be structured so as to avoid invading the space of democratic actors? This is a highly relevant question within mature democracies; it may be a less relevant question in newer democracies with serious defects in their democratic institutions. A dynamic perspective suggests instead a richer debate on remedies, which would mine a set of tools existing somewhere on a spectrum between weak-form and strong-form review. And it would work towards figuring out which of those tools did the most effective job, in different kinds of contexts, at building up the strength of civil society around constitutional issues, in giving civil society a voice within the state, and in constructing a more salient constitutional culture.

B. The Unconstitutional Constitutional Amendment Doctrine

The doctrine of unconstitutional constitutional amendments stands as one of the oddest and most difficult doctrines to justify in comparative constitutional law. From the standpoint of conventional constitutional theory, the doctrine is a puzzle. As Gary Jacobsohn has written, striking down a proposed constitutional amendment on the ground that that amendment conflicts with considered here, the Treatment Action Campaign case was a clear and well-publicized victory.

See supra Part II.C (describing how such an approach has been used in both Colombia and India).

See Cesar Rodriguez Garavito, Beyond the Courtroom: The Impact of Judicial Activism on Socioeconomic Rights in Latin America, 89 Tex. L. Rev. 1669, 1669 (2009) (describing such hearings held in Colombia).
unwritten constitutional principles is the “most extreme of counter-majoritarian acts.” Ordinary judicial review strikes down statutes but leaves political actors with the safety valve of passing amendments in order to override that judicial decision. The unconstitutional constitutional amendments doctrine takes away the safety valve and removes any possibility of political and popular override of the judiciary, at least short of wholesale constitutional replacement. It is no wonder that many constitutional theorists have found the doctrine difficult to justify. Jacobsohn himself notes that the doctrine may justify use only in cases so extreme as to make one wonder whether applying the doctrine would have any point.

Yet in comparative terms, the doctrine is one of the greatest success stories in the field, spreading across the world to include systems in Asia, Latin America, Africa, and Eastern Europe. And in many countries, the doctrine is now deployed by judges relatively routinely: citing a few examples from India and Colombia might be helpful in showing the doctrine’s modern scope. In Colombia, the best-known uses are the cases involving Alvaro Uribe’s second and third terms, where the Court allowed a constitutional amendment allowing one reelection but blocked a constitutional amendment allowing two, in a decision heralded as potentially preventing significant democratic erosion.

---

237 The question of whether constitutional replacement is a possibility depends on one’s view of whether and how the existing constitution constrains the possibility of writing a new constitution. See generally Joel Colon-Rios, *The Legitimacy of the Juridical: Constituent Power, Democracy, and the Limits of Constitutional Reform*, 48 Osgoode Hall L.J. 199, 203-19 (2010) (outlining and describing a broad theory of constituent power that gives the people powers of constitutional replacement).
239 See Gary Jeffrey Jacobsohn, *An Unconstitutional Constitution?: A Comparative Perspective*, 4 Int’l J. Const. L. 460 (2006) (“[I]f ever confronted with the felt need to exercise this option, sober heads might well wonder whether it was any longer worth doing.”).
241 See supra text accompanying notes Error! Bookmark not defined.-Error! Bookmark not defined..
The Court’s reasoning noted that the proposed third term, under the domestic constitutional design, would give Uribe unprecedented power to appoint and influence officials staffing independent institutions that were supposed to check him.\textsuperscript{242} Further, it pointed out after a brief comparative survey that in pure presidential systems, third-term presidencies were rarely allowed.\textsuperscript{243}

In a series of additional cases, the Colombian Constitutional Court has either threatened to use or actually used the doctrine in less dramatic circumstances. For example, in a landmark case the Court had legalized simple drug possession, citing principles of personal autonomy.\textsuperscript{244} When political actors passed a constitutional amendment recriminalizing drug possession but providing for treatment rather than criminal penalties, the amendment was challenged in front of the Court. The Court dismissed the petition on technical grounds, but suggested that any attempt to impose criminal penalties would have been an unconstitutional constitutional amendment, because it would have replaced core constitutional principles of individual autonomy.\textsuperscript{245} In a second case, the Court actually struck down an attempt to evade prior Constitutional Court decisions forcing the entire bureaucracy – including incumbents – to stand for meritocratic civil service exams rather than automatically being confirmed in their posts. After the Court invalidated laws attempting to exempt some incumbent bureaucrats from civil service exams mandated by the Constitution of 1991, Congress responded by passing a constitutional amendment to the same effect. The Court invalidated the constitutional amendment, holding that it was unconstitutional because it substituted the constitutional principle of “meritocracy.”\textsuperscript{246}

In the most recent case, the Court faced an amendment that purported to create a new constitutional principle of “fiscal sustainability.”\textsuperscript{247} The amendment

\textsuperscript{242} See Decision C-141 of 2010, § 2.8.1, available at http://www.corteconstitucional.gov.co/relatoria/2010/c-141-10.htm. The Court noted for example many institutions had staggered terms or longer terms than the president, and others were insulated by having some other institution make the selection. But after twelve years in power, the President would, realistically, gain power over virtually all of these institutions. See id.
\textsuperscript{243} See id. § 6.2.1.4.2.
\textsuperscript{245} See Decision C-574 of 2011, available at http://www.corteconstitucional.gov.co/relatoria/2011/c-574-11.htm. The technical reasons for dismissing the petition were that the actor had only challenged the piece of the amendment criminalizing drug possession, and had not also included in the demand the part of the amendment providing for “treatment” rather than punishment. See id. § VI.6.1-VI.6.15.
also created a new mechanism for executive officials to ask courts to review and reconsider their previously-made decisions if those decisions have significant fiscal consequences. The amendment was passed in reaction to the Constitutional Court’s extensive jurisprudence on socio-economic rights, which many government officials thought too costly and too interventionist. Under the Court’s long-standing interpretation of article 1 of the Constitution, which defines Colombia as a “social state of right,” socioeconomic rights are broadly judicially enforceable and the state must prioritize social spending.

The amendment was challenged as a possible substitution of the constitution, and the Court upheld the amendment only after limiting its effect in important ways. The Court held that “fiscal sustainability” should be understood as a mere instrument in service of the realization of fundamental rights and principles, rather than as a fundamental principle in its own right. Further, the Court held that the new mechanism for reconsideration was constitutionally acceptable only because if left the judge who made the decision with full authority over whether to reverse the prior decision or even to hear arguments on a challenge. In effect, the Court applied a supra-constitutional canon of avoidance, upholding the constitutional amendment only by defanging it.

The Indian jurisprudence shows a similar although less dramatic tendency towards expansion away from a “core” set of cases. The early cases were closely tied to Indira Gandhi’s emergency and aimed primarily at stopping Gandhi from insulating her actions entirely from judicial review. These decisions played a modest but perhaps meaningful role at preventing an erosion of democracy. More recent cases, issued after the political system fragmented, have also focused on the insulation of activity from judicial review, but within quite different contexts. For example, in L. Chandra Kumar v. Union of India, the Indian Supreme court held that constitutional amendments shunting cases concerned with the civil service away from the ordinary judiciary and into newly created administrative tribunals were violations of the basic structure doctrine and thus unconstitutional constitutional amendments. Indeed, one commentator has argued that the main thrust of the doctrine, in terms of its

---

248 See id. § II (giving the text of the amendment at issue).
249 See id. § VI.32.
251 See id. § VI.64 (stating that the principle “is not a constitutional end in its own right, but just a means for the achievement of the social and democratic state of right”).
252 See id. § 74.3.
253 See supra note Error! Bookmark not defined. (giving cases from before, during, and after the Emergency).
actual use, has been to allow the judiciary to act as a “closed shop” by cutting off other avenues of redress like special tribunals and arbitration panels.  

In examining these cases, the core question is the following: What explains the divergence between the expectations of standard constitutional theory and the reality of practice, under which the doctrine is regularly used? A dynamic perspective of judicial role offers a reasonable defense of the doctrine. Descriptively, it explains why the use has become so routinized across certain countries. Usage of the doctrine is based both in a distrust of existing democratic institutions, which are seen as capable of producing flawed constitutional amendments, and concern about the effects that certain amendments might have on the democratic order. Normatively, the fact that certain democracies are relatively fragile gives some justification for using the doctrine in order to defend against democratic erosion. At least some uses of the doctrine – the Uribe reelection decisions and the Indian cases during the emergency – seem justifiable in light of the fragility of their democratic orders. Where judges have good reason to believe that a set of constitutional changes raises a significant risk of democratic erosion, they are on solid ground in striking down constitutional amendments.  

---

256 In contrast, existing theories do a fairly poor job of explaining and justifying the doctrine. The leading contender is the theory of “original constituent power,” under which some changes to the existing legal order are so fundamental that they are reserved to the “people” and can only be made through wholesale replacement of the existing constitution. In contrast, the “constituted powers” – the institutions of state – enjoy only a limited power of constitutional change, without any ability to alter those fundamental principles. This principle has been adopted by many of the courts using the doctrine. See Rios, supra note 237, at 219-28. But unless the constitutional text clearly limits the power of constitutional amendment (which is fairly rare), there is no reason to assume any limitation on the amendment power of the constituted powers, and perhaps even less reason to think that courts rather than the political branches should be the ones charged with discovering those limits. See Carlos Bernal-Pulido, Unconstitutional Constitutional Amendments in the Case Study of Colombia: An Analysis of the Justification and Meaning of the Constitutional Replacement Doctrine, 11 INT’L J. CONST. L. 339, 347 (2013).  
258 See supra text accompanying notes Error! Bookmark not defined.. Bookmark not defined. (giving the background to both of these incidents).  
259 There is a separate question lurking here – how do judges know that a given constitutional change in fact will work substantial erosion in the democratic order? One possibility is to use comparative or transnational guidance as a check on judicial over-activism, and to strike down amendments primarily when the change at issue
Use beyond clear cases of democratic preservation raises more difficult issues. There are dual risks to broader use: (1) excessive distrust of current democracy and (2) possible warping of the pathway of democracy. On the first point, it is surely not an accident that the doctrine has made the most headway within systems where there is a pervasive public distrust of political institutions, and where judges openly share that distrust. But the fact that political institutions sometimes function badly does not imply that they always function badly. This suggests that use of the doctrine should be restrained. Invalidation of a constitutional amendment is an act that expresses much more disrespect of political institutions than ordinary exercises of judicial review. Many – perhaps most – uses of the doctrine fail under this criterion. Many uses of the doctrine appear to be based on turf-protection: courts use their ultimate power over constitutional amendment to protect the doctrines or interests that are dear to them. There is also some evidence that the doctrine can become an ordinary tool of democracy-improvement: courts strike down amendments eluding meritocracy, or transferring cases outside of the ordinary judiciary, not because they reasonably fear a significant retrogression in the democratic order but because they perpetuate problematic aspects of the system, like bureaucratic incapacity. These uses of the doctrine are difficult to justify: the ends pursued by courts may be important, but there are less problematic ways to pursue them. Exercises of ordinary judicial review should suffice.

The second risk – that use might warp democratic development – is less serious. The doctrine of unconstitutional constitutional amendments is probably less corrosive than excluding some political forces from electoral politics, as counseled by the militant democracy model. Exclusion of major political actors plausibly weakens the development of electoral politics and may disenchant some groups of citizens with democracy. Overuse of the unconstitutional

would create an institutional design not generally seen elsewhere. See Rosalind Dixon & David Landau, Transnational Constitutionalism and a Limited Doctrine of Unconstitutional Constitutional Amendment, 13 INT’L J. CONST. L.  __ (forthcoming 2014). In the Uribe cases, for example, the Court placed great weight on the fact that two-term presidencies were common in pure presidential systems, but the allowance of additional terms beyond two terms is quite rare comparatively. See Decision C-141 of 2010, § 6.3.5.1.2, available at http://www.corteconstitucional.gov.co/relatoria/2010/c-141-10.htm.

See supra Part III.B (discussing both of these problems as they bear on a dynamic theory of role).

See supra text accompanying notes 70-72 (giving examples of judges expressing distrust of democracy in both India and Colombia).

See supra text accompanying notes 246, 254-255 (discussing cases from India and Colombia).

constitutional amendments doctrine could cause a variant of the “judicial overhang,” dampening the extent to which political actors internalize constitutional values. But this would seem to be a less serious risk to democratic development.

Further, it could be that use of the doctrine has the opposite effect, helping to spread constitutional culture in countries where it is weak or nonexistent. Few decisions send a clearer signal of the importance of constitutional values than decisions striking down constitutional amendments because of their inconsistency with those values. These decisions may alert citizens that political actors are posing a substantial danger to principles that the court views as fundamental constitutional values. In practice, a judicial decision striking down a constitutional amendment will rarely act as the final word, but instead may start a dialogue about the importance of the principle in question. In other words, invalidation of constitutional amendments may play a “fire alarm” function, telling the populace that something worth paying attention to is going on.

If this is right, then it means that the truly hard cases are ones like the Colombian “fiscal sustainability” decision. The Court has long pushed an interpretation of the constitution as prioritizing social welfare, arguing that Colombia in its first article is defined as a “social state of right” and issuing influential decisions protecting socioeconomic rights. Indeed, the Court is probably best known for its aggressive enforcement of rights like the right to healthcare and housing. In a mature democratic order, the choice of democratic actors to amend the constitution in order to subordinate social rights to fiscal considerations, or at least to make them weigh equally, would seem defensible as an alternative interpretation of fundamental principles. But in

Party being prohibited from winning elections because of its repugnance to elites as an “impossible game” that destabilized the regime).

See Thomaz Pereira, Entrenchment and Constitutional Politics: Interpreting Eternity Clauses (paper presented at the Younger Comparativists Conference of the American Society of Comparative Law, Apr. 19, 2014) (finding that “eternity clauses” prohibiting constitutional change to certain articles acted as the start of dialogue rather than as the final word).

See David Law, A Theory of Judicial Power and Judicial Review, 97 Geo. L.J. 723, 731-32 (defending judicial review as a “fire alarm,” or a way for citizens to get cheap information about abuses by their government, and as a coordination mechanism).

See supra text accompanying note 250.

See, e.g., Manuel Jose Cepeda, Transcript: Social and Economic Rights and the Colombian Constitutional Court, 89 Tex. L. Rev. 1699, 1699 (noting the importance of socioeconomic rights decisions to the Colombian Constitutional Court).
Colombia, there may be some value to the Court’s articulation of the “social state of right” principle as a fundamental principle of Colombian constitutionalism. Such a decision might be part of the effort to create a constitutional culture in the country. And the Court’s decision has not acted as the final word. The Congress has responded with a law supposedly developing the constitutional amendment but in reality giving the amendment an interpretation that gives “fiscal sustainability” much greater weight than in had in the Court’s decision.270 The resulting exchange may have started something of a political debate about the relative importance of the “social state of right” criterion in Colombian constitutionalism.

In short, the dynamic theory suggests that many uses of the doctrine are unjustifiable. However, it provides support for at least a very limited version of the doctrine of unconstitutional constitutional amendments as a way to preserve democracy against substantial erosion. It may also provide support for a somewhat broader version of the doctrine as a way to identify and publicize fundamental constitutional values.271

V. CONCLUSION

Nimer Sultany has recently argued that standard constitutional theory runs in circles: it asks a question -- how to square judicial review with democracy -- that it cannot answer in a coherent or satisfying way.272 He thus posits that constitutional theorists should seek a different, and more productive, set of questions.273 This article is an attempt to construct a more practical and productive constitutional theory, at least for a subset of constitutional courts.

The emerging constitutional courts and constitutional orders of what scholars have called the “global south” merit analysis on their own terms. These courts face a set of institutional and social problems that often dwarf those found in more mature democracies. This paper argues that the best conception of

270 See, e.g., Carlos Parra Dussan, Incidente de impacto fiscal, LA REPUBLICA, Jan. 31, 2014 (noting that the law includes a version of the legal action for fiscal revision that is quite demanding on the judiciary), available at http://www.larepublica.co/asuntos-legales/incidente-de-impacto-fiscal_106686.

271 A corollary of this point is that a court will be most effective in playing this role if it issues decisions based on clear principles, and which are publicized widely. Many uses of the doctrine seem to fail this test. In the famous Indian case Raj Narain, for example, members of the Court broadly agreed that the amendment at issue, which stripped courts of jurisdiction over electoral matters, violated the basic structure doctrine. But they disagreed broadly over whether the proper principle to rely on was democracy, equality, or the separation of powers. See Indira Nehru Gandhi v. Shri Raj Narain, (1975) S.C.C. 159.

273 See id. at 455 (“Perhaps it is more fruitful to ask new questions.”).
The judicial role in these systems is a dynamic one, which focuses on courts seeking to improve the quality of democracy over time. The advantage of such a conception is in suggesting a more fruitful set of questions, most of which need empirical study.

We need more work on the kinds of judicial strategies that are possible in different kinds of political contexts, and also on the effects of those strategies on their political systems. We need to know whether “insider” strategies, which focus on building up political institutions directly, or “outsider” strategies, which focus on building up democratic spaces around political institutions, are more likely to be effective. And most broadly, we need research on the dynamic effects of judicial activism, within initially problematic political orders, on politics and society. To what extent can courts improve the functioning of democratic institutions, build up civil society, or spread constitutional culture? It is remarkable how little we know about the answers to those questions. The ultimate value of a more refined and careful dynamic theory, then, may be in suggesting an agenda for scholars and judges of the “global south.”
